

Avalancherisk assessmentbulletin

(valid outside marked and open slopes)

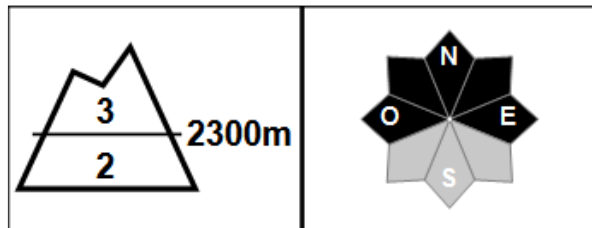

MASSIVE:CHABLAIS

written on Tuesday January 05, 2021 at 4 p.m.

Risk estimation until Wednesday 06 January 2021 in the evening

Above 2300 m: Significant risk. Below: Limited risk.

Spontaneous departures: Rare bottom plates (crawls) below 2000 m.

Triggers skiers: Some recent hard old / friable plates.

Risk indices: 5 very strong - 4 strong - 3 marked - 2 limited - 1 weak - In black: the most dangerous slopes

Snowpack stability

This bulletin is written from reduced information.

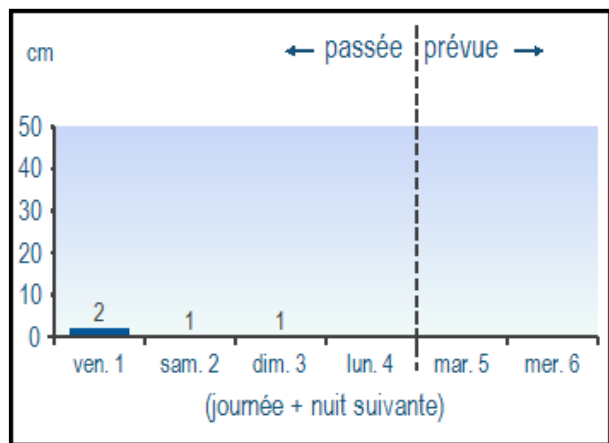

Typical situations: windy snow, persistent fragile underlay.

Spontaneous avalanches: Rare bottom patches (crawling) in steep and grassy slopes, mainly below 2000 m. Avalanches of medium size possible at any time.

Accidental releases: A few crumbly patches in recent snow, in areas of accumulation by the wind which blew mainly from the southwest. A fortiori in steep ubacs, close to irregularities in the ground.

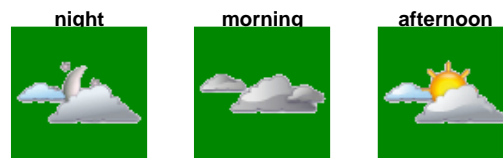

Above 2200/2300 m, presence of fragile sub-layers buried in the western, northern and eastern slopes. On these slopes, one cannot exclude breaking a plate over a great width.

Fresh snow at 1800 m

Weather preview

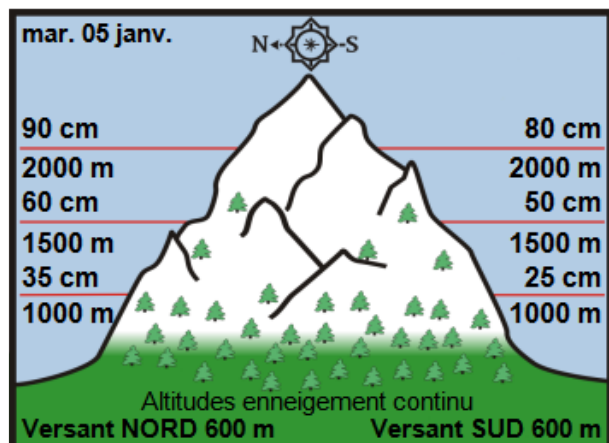

Wednesday 06 January

Rain snow

| ISO 0 ° C | 600 m | 400 m | 400 m |
|-------------|-----------|-----------|-----------|
| Wind 2000 m | 10 km / h | 0 km / h | 0 km / h |
| Wind 2500 m | 10 km / h | 10 km / h | 10 km / h |

Off-piste snow depth

Snow quality

You can put on around 1000/1200 m. Watch out for pebbles under recent snow.

Quality: recent cold snow, rather light. Dense snow below 1800/2000 m. Snow worked by the wind near the ridges (ledges or peeled and icy ridges).
