

Health & Safety policy

For transport providers

To be responsible for the health & safety of your people and for their behaviour, particularly on the road.

To promote the principles of safe driving, to respect time driving & breaktime

To provide the means and equipment to limit the exposure to risks (good technical conditions, maintenance, mechanical handling means, Personal Protective Equipment, ergonomics of the driver's cab...)

To gather information on any potential identified risks from your drivers, included those related to their health and equipment

To raise awareness and train your drivers on the health and safety risks (for example: sleep, a balanced diet, addiction, physical activity and ergonomics...)

To manage health & safety over time, for instance with audits, self assessment, discussions with your collaborators, feedback, action plans and accident tracking

To report and analyse accidents linked to the service provided to FM Logistic. To send this information to FM Logistic as soon as it is available

“ **Zero accident:** this is FM Logistic's health & safety ambition. One accident is an accident too many. This health & safety commitment is designed to guarantee safety: **everywhere** (roads & platforms) and for **everyone** (drivers, road users, platform workers). This is why the commitments also extends to our transport partners. **We need you**, every gesture counts. ”
