

AB-2 Angle Block - Extra Angle Accessory

Further customization is available with the AB-2 Angle Block accessory.

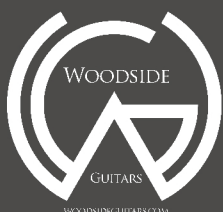

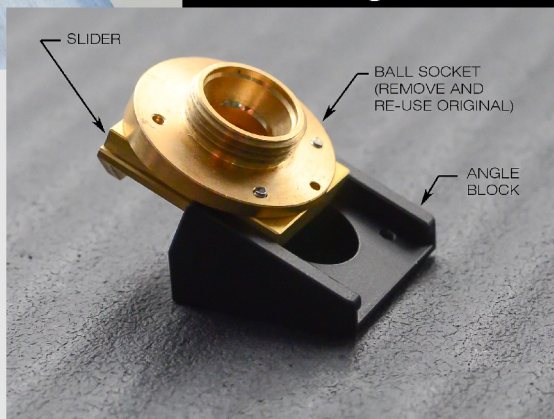

This is especially welcome for those players preferring a more upright playing position.

With your choice of either 15° or 25° offset bases (both included), the standard Woodside ball & socket mechanism can further extend its standard 13° angular adjustment range.

Since the Angle Block can be mounted in any orientation on the Cradle, you get an incredible amount of angular adjustment as well as a very stable platform.

The AB-2 is compatible with all versions of the Woodside Guitar Support. No other guitar support offers this degree of adjustment - truly allowing a custom fit for all.
