3/21

Orbit: definition

Matrix pencil: $A + \lambda B$, with $A, B \in \mathbb{C}^{m \times n}$

(or matrix pairs (A, B)).

 $A + \lambda B$ and $A' + \lambda B'$ are strictly equivalent if:

A' = PAQ, B' = PBQ, for some P, Q invertible.

(namely, $A' + \lambda B' = P(A + \lambda B)Q$).

Orbit: definition

Matrix pencil: $A + \lambda B$, with $A, B \in \mathbb{C}^{m \times n}$

(or matrix pairs (A, B)).

 $A + \lambda B$ and $A' + \lambda B'$ are strictly equivalent if:

A' = PAQ, B' = PBQ, for some P, Q invertible.

(namely, $A' + \lambda B' = P(A + \lambda B)Q$).

Definition (orbit)

 $\mathscr{O}(A + \lambda B) := \{ P(A + \lambda B)Q : P, Q \text{ invertible} \}.$

(i.e.: it's the set of pencils which are strictly equivalent to $A + \lambda B$).

4/21

(日)

Orbit and the KCF

Theorem (Kronecker Canonical Form, KCF)

Every pencil is strictly equivalent to a direct sum, uniquely determined (up to permutation), of blocks:

• Blocks associated with finite evals (μ): $J_k(\mu) := \begin{bmatrix} \lambda - \mu & 1 & & \\ & \ddots & \ddots & \\ & & \lambda - \mu & 1 & \\ & & \ddots & & \\ & & & \lambda - \mu & 1 & \\ & & & & \end{pmatrix}$ ($k \ge 1$).

• Blocks associated with the ∞ eval: $J_k(\infty) := \begin{bmatrix} 1 & \lambda \\ & \ddots & \ddots \\ & & 1 & \lambda \\ & & & 1 & \lambda \end{bmatrix}$ $(k \ge 1).$

• Right singular blocks: $R_k(\lambda) =: \begin{bmatrix} \lambda & 1 & \\ \lambda & 1 & \\ & \ddots & \ddots & \\ & & \lambda & 1 \end{bmatrix}_{k \times (k+1)} (k \ge 0).$

• Left singular blocks: $R_k(\lambda)^{\top}$ $(k \ge 0)$.

Orbit and the KCF

Theorem (Kronecker Canonical Form, KCF)

Every pencil is strictly equivalent to a direct sum, uniquely determined (up to permutation), of blocks:

• Blocks associated with finite evals (μ) : $J_k(\mu) := \begin{bmatrix} \lambda - \mu & 1 \\ \ddots & \ddots \\ \lambda - \mu & 1 \\ \lambda - \mu \end{bmatrix}_{k \times k} (k \ge 1).$

• Blocks associated with the
$$\infty$$
 eval: $J_k(\infty) := \begin{bmatrix} 1 & \lambda \\ \ddots & \ddots \\ & 1 & \lambda \\ & & 1 \end{bmatrix}_{k \times k}$ $(k \ge 1)$

• Right singular blocks:
$$R_k(\lambda) =: \begin{bmatrix} \lambda & 1 & \\ & \lambda & 1 \\ & \ddots & \ddots \\ & & \lambda & 1 \end{bmatrix}_{k \times (k+1)} \quad (k \ge 0).$$

• Left singular blocks: $R_k(\lambda)^{\top}$ $(k \ge 0)$.

Provide the KCF.

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

Problem: Characterize the inclusion $L_1 \in \overline{\mathcal{O}}(L_2)$.

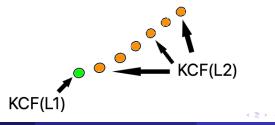

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{O}}(L_2)$.

Motivation: When computing KCF(L_1), if $L_1 \in \overline{\mathcal{O}}(L_2)$, there are arbitrarily small perturbations, $L_1 + L_{\varepsilon}$, s. t. KCF($L_1 + L_{\varepsilon}$) =KCF(L_2).

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

Problem: Characterize the inclusion $L_1 \in \overline{\mathcal{O}}(L_2)$.

Lemma $L_1 \in \overline{\mathcal{O}}(L_2) \Leftrightarrow \mathcal{O}(L_1) \subset \overline{\mathcal{O}}(L_2) \Leftrightarrow \overline{\mathcal{O}}(L_1) \subset \overline{\mathcal{O}}(L_2).$

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{O}}(L_2)$.

Lemma

$$L_1 \in \overline{\mathscr{O}}(L_2) \Leftrightarrow \mathscr{O}(L_1) \subseteq \overline{\mathscr{O}}(L_2) \Leftrightarrow \overline{\mathscr{O}}(L_1) \subseteq \overline{\mathscr{O}}(L_2).$$

Proof: If $P_nL_2Q_n \rightarrow L_1$, then $(PP_n)L_2(Q_nQ) \rightarrow PL_1Q$.

イロト 不得 トイヨト イヨト 二日

 L, L_1, L_2 are $m \times n$ pencils.

 $\overline{\mathscr{O}}(L)$: closure of $\mathscr{O}(L)$ (in the standard topology of $\mathbb{C}^{m \times n} \times \mathbb{C}^{m \times n}$).

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{O}}(L_2)$.

Lemma

$$L_1 \in \overline{\mathscr{O}}(L_2) \Leftrightarrow \mathscr{O}(L_1) \subseteq \overline{\mathscr{O}}(L_2) \Leftrightarrow \overline{\mathscr{O}}(L_1) \subseteq \overline{\mathscr{O}}(L_2).$$

The inclusion relationship between orbit closures allows us to classify the KCFs according to their "genericity".

Orbit closures: domination rules

(Recall: Weyr characteristic of $N = (n_1, n_2, \dots, n_k, 0, 0, \dots)$, is $W(N) := (w_1(N), w_2(N), \ldots)$ with $w_i(N) = \#\{n_i : n_i \ge i\}$.

r(L): Weyr characteristic of the sizes of right singular blocks in KCF(L). $\ell(L)$: Weyr characteristic of the sizes of left singular blocks in KCF(L). $W(\mu, L)$: Weyr characteristic of the sizes of Jordan blocks of μ in KCF(L).

Definition:
$$(m_1, m_2, \ldots) \prec (n_1, n_2, \ldots) \Leftrightarrow \sum_{i=1}^k m_i \leq \sum_{i=1}^k n_i$$
, for all $k \geq 1$.

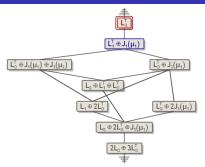

Theorem [Pokrzywa'86]

$$\overline{\mathscr{O}}(L_1) \subseteq \overline{\mathscr{O}}(L_2) \text{ iff:}
(i) $r(L_1) \prec r(L_2) + (h, h, ...),
(ii) $\ell(L_1) \prec \ell(L_2) + (h, h, ...),$
(iii) $W(\mu, L_2) \prec W(\mu, L_1) + (h, h, ...), \forall \mu \in \overline{\mathbb{C}},$
where $h := \operatorname{rank} L_2 - \operatorname{rank} L_1.$$$$

Bundle: definition

Definition (bundle)

The bundle of *L*, $\mathscr{B}(L)$, is the set of matrix pencils with the same KCF as *L*, up to the specific values of the evals.

Example: If

$$L = R_1(\lambda) \oplus J_1(\mu) = \begin{bmatrix} \lambda & 1 & 0 \\ \hline 0 & 0 & \lambda - \mu \end{bmatrix},$$

then

$$\mathcal{B}(L) = \left\{ P\left[\begin{array}{c|c} \lambda & 1 & 0 \\ \hline 0 & 0 & \lambda - \alpha \end{array} \right] Q \colon P, Q \text{ invertible}, \ \alpha \in \mathbb{C} \right\} \\ \cup \left\{ P\left[\begin{array}{c|c} \lambda & 1 & 0 \\ \hline 0 & 0 & 1 \end{array} \right] Q \colon P, Q \text{ invertible} \right\}.$$

A bundle is a union of orbits (infinite, provided that there are eigenvalues).

Fernando De Terán (UC3M)

Bundle: different eigenvalues

Important: The number of different eigenvalues must stay invariant!

4 A N

Bundle: different eigenvalues

Important: The number of different eigenvalues must stay invariant! **Example:** If

$$L = J_2(0) \oplus J_1(1) = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix},$$

then $\mathscr{B}(L) = P(J_2(\alpha) \oplus J_1(\beta))Q$ with $\alpha \neq \beta$ (one of α, β can be ∞).

< □ > < 同 > < 回 > < 回 > .

Bundle: different eigenvalues

Important: The number of different eigenvalues must stay invariant! **Example:** If

$$L = J_2(0) \oplus J_1(1) = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix},$$

then $\mathscr{B}(L) = P(J_2(\alpha) \oplus J_1(\beta))Q$ with $\alpha \neq \beta$ (one of α, β can be ∞). Therefore:

$$J_2(0)\oplus J_1(0)=\begin{bmatrix}\lambda & 1 & 0\\ 0 & \lambda & 0\\ 0 & 0 & \lambda\end{bmatrix}\notin \mathscr{B}(L).$$

Q: Same domination rules as for the orbits?

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

- Q: Same domination rules as for the orbits?
- A: NO. Different eigenvalues may coalesce.

13/21

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

Q: Same domination rules as for the orbits?

A: NO. Different eigenvalues may coalesce.

Example:
$$L = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix}$$
, $\widetilde{L} = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda \end{bmatrix}$. Then
• $\widetilde{L} \notin \mathscr{B}(L)$,
• $\widetilde{L} \notin \overline{\mathscr{O}}(L)$
• $\widetilde{L} \in \overline{\mathscr{B}}(L)$.

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

Q: Same domination rules as for the orbits?

A: NO. Different eigenvalues may coalesce.

Example:
$$L = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix}$$
, $\widetilde{L} = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda \end{bmatrix}$. Then
• $\widetilde{L} \notin \mathscr{B}(L)$,
• $\widetilde{L} \notin \overline{\mathscr{O}}(L)$
• $\widetilde{L} \in \overline{\mathscr{B}}(L)$.

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

Q: Same domination rules as for the orbits?

A: NO. Different eigenvalues may coalesce.

Example:
$$L = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix}$$
, $\widetilde{L} = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda \end{bmatrix}$. Then
• $\widetilde{L} \notin \mathscr{B}(L)$,
• $\widetilde{L} \notin \overline{\mathscr{O}}(L)$

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

Q: Same domination rules as for the orbits?

A: NO. Different eigenvalues may coalesce.

Example:
$$L = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix}$$
, $\widetilde{L} = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda \end{bmatrix}$. Then
• $\widetilde{L} \notin \mathscr{B}(L)$,

L̃ ∉ *Õ*(*L*) (the number of different eigenvalues must be the same), *L̃* ∈ *B*(*L*).

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

- Q: Same domination rules as for the orbits?
- A: NO. Different eigenvalues may coalesce.

Example:
$$L = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda - 1 \end{bmatrix}$$
, $\widetilde{L} = \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 0 \\ \hline 0 & 0 & \lambda \end{bmatrix}$. Then
• $\widetilde{L} \notin \mathscr{B}(L)$,

- $\widetilde{L} \notin \overline{\mathscr{O}}(L)$ (the number of different eigenvalues must be the same),
- $\widetilde{L} \in \overline{\mathscr{B}}(L)$.

Problem: Characterize the inclusion $L_1 \in \overline{\mathscr{B}}(L_2)$.

- Q: Same domination rules as for the orbits?
- A: NO. Different eigenvalues may coalesce.

. **Proof:** $L_{\varepsilon} := \begin{bmatrix} \lambda & 1 & 0 \\ 0 & \lambda & 1 \\ 0 & 0 & \lambda + \varepsilon \end{bmatrix} \in \mathscr{B}(L)$, and $L_{\varepsilon} \to \widetilde{L}$.

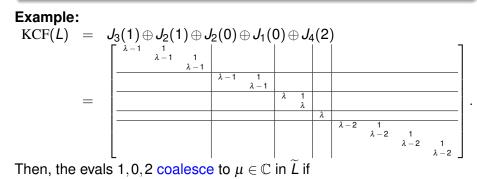

Bundles come into play

Coalescence of eigenvalues

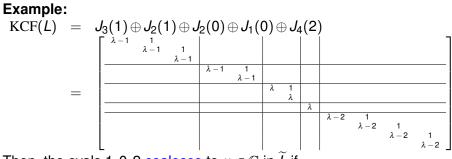

Coalescence of evals: Take the union of their Weyr characteristics. (i.e.: add up the sizes of the Jordan blocks).

.

Coalescence of evals: Take the union of their Weyr characteristics. (i.e.: add up the sizes of the Jordan blocks).

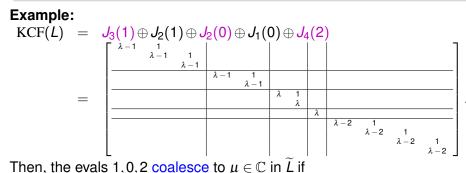

Coalescence of evals: Take the union of their Weyr characteristics. (i.e.: add up the sizes of the Jordan blocks).

Then, the evals 1,0,2 coalesce to $\mu \in \mathbb{C}$ in \widetilde{L} if

$$\operatorname{KCF}(\widetilde{L}) = J_9(\mu) \oplus J_3(\mu).$$

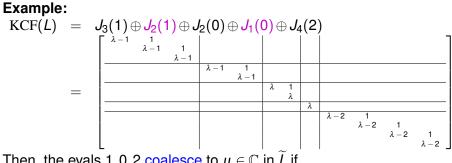

Coalescence of evals: Take the union of their Weyr characteristics. (i.e.: add up the sizes of the Jordan blocks).

$$\mathrm{KCF}(\widetilde{L}) = J_9(\mu) \oplus J_3(\mu).$$

Coalescence of evals: Take the union of their Weyr characteristics. (i.e.: add up the sizes of the Jordan blocks).

en, the evals 1,0,2 coalesce to
$$\mu \in \mathbb{C}$$
 in L if

$$\operatorname{KCF}(\widetilde{L}) = J_9(\mu) \oplus J_3(\mu).$$

Rules for the inclusion of bundle closures

Theorem (domination rules for bundle closures)

 $\overline{\mathscr{B}}(\widetilde{L}) \subseteq \overline{\mathscr{B}}(L)$ if and only if $\mathrm{KCF}(\widetilde{L})$ is obtained from $\mathrm{KCF}(L)$ after coalescing eigenvalues and applying the dominance rules for closure orbit inclusion.

Rules for the inclusion of bundle closures

Theorem (domination rules for bundle closures)

 $\overline{\mathscr{B}}(\widetilde{L}) \subseteq \overline{\mathscr{B}}(L)$ if and only if $\mathrm{KCF}(\widetilde{L})$ is obtained from $\mathrm{KCF}(L)$ after coalescing eigenvalues and applying the dominance rules for closure orbit inclusion.

Same result, for bundles of matrices under similarity, stated (not proved) in

A. Edelman, E. Elmroth, B. Kågström. SIAM J. Matrix Anal. Appl., 20-3 (1999) 667–699.

However, no formal definition of coalescence is provided in that reference.

Stratigraph again

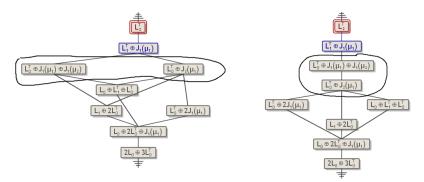

Let's compare bundles and orbits:

Orbits (left) and bundles (right) of 3×2 pencils

Orbits (left) and bundles (right) of 3×2 pencils

•
$$\widetilde{L} \in \overline{\mathscr{B}}(L) \Rightarrow \mathscr{B}(\widetilde{L}) \subseteq \overline{\mathscr{B}}(L).$$

- Bundle closures are "stratified manifolds" (namely, the union of the bundle itself with other bundles of smaller dimension).
- Bundles are open in their closure.

- Bundle closures are "stratified manifolds" (namely, the union of the bundle itself with other bundles of smaller dimension).
- Bundles are open in their closure. The same is true for bundles of matrices (under similarity) and matrix polynomials (under strict equivalence).

Orbits closures of matrix pencils under strict equivalence

Bundles come into play

< 6 b

Our contribution

• We have provided a formal notion of coalescence of eigenvalues.

- We have provided necessary and sufficient conditions for the inclusion of bundle closures.
- We have proved that bundles are open in their closure.

Our contribution

- We have provided a formal notion of coalescence of eigenvalues.
- We have provided necessary and sufficient conditions for the inclusion of bundle closures.
- We have proved that bundles are open in their closure.

Open questions

- For matrix polynomials, P₁, P₂: provide necessary and sufficient conditions for B(P₁) ⊆ B(P₂).
- For structured pencils (alternating, symmetric, Hermitian, palindromic...), L_1, L_2 : provide necessary and sufficient conditions for $\overline{\mathscr{B}}(L_1) \subseteq \overline{\mathscr{B}}(L_2)$.
- For matrix polynomials and structured pencils: Are bundles open in their closure?
