

4.3.4 CO_2 (gas), SO_2 and other pollutants are released from the combustion of fossil fuels.

4.3.5 The CO_2 gas (greenhouse gas) is released from the combustion of fossil fuels (acid rain) and other sources. It is a major contributor to global warming.

4.3.6 The CO_2 gas is released from the combustion of fossil fuels.

4.3.7 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.4 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming. The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming. The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.5 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.6 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming. The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming. The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.6.1 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.6.2 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.

4.6.3 1 The CO_2 gas is released from the combustion of fossil fuels, and it is a major contributor to global warming.
