

JOB DESCRIPTION

Job Summary:

The Software Developer, Information Technology Department is responsible for designing, developing, testing, and maintaining software applications that meet the organization's requirements. This role involves collaborating with various departments to ensure software solutions align with business goals, troubleshooting issues, and contributing to system architecture decisions.

Job Duties:

- Write clean, scalable, and efficient code based on business requirements using programming languages such as Java, Python, C#, PHP, .NET, or others.
- Participate in system design discussions and contribute to the development of robust and scalable software architectures.
- Develop and implement software testing protocols, troubleshoot, and fix bugs to ensure high-quality software performance.
- Maintain comprehensive documentation for all software solutions, including codebase, design, and architecture.
- Work closely with cross-functional teams to deliver complete software solutions.
- Provide ongoing support and maintenance for software systems, address any performance or usability issues, and ensure timely updates.
- Stay updated with new technologies, frameworks, and best practices, and evaluate their application to enhance software performance.
- Manage and maintain version control systems (e.g., Git) for efficient collaboration with other developers.
- Ensure software solutions are secure, following the latest best practices for cybersecurity.

Salary:

Negotiable (based on experience and qualification)

Additional Responsibilities:

Perform other work-related duties assigned by the Business Center Corporation.

Work Location:

- Business Center Corporation Head Office
