Features

Seamless Fusion of Laser & Dual-Camera for Next-Level Surveying & Stakeout
Jupiter Laser RTK is a high-end GNSS receiver that integrates cutting-edge GNSS, IMU, Laser and dual-camera technologies. Building on the advanced laser technology of the Universe Series, Jupiter also incorporates SinCGNSS's latest visual stake-out technology. This combination brings out immersive surveying and stakeout experiences, even in previously hard-to-reach, signal-blocked, or dangerous field.

SATELLITE TRACKING		SATELLITE TRACKING	
GPS	L1/L2/L3	GLONASS	L1/L2/L3
GPS	B1/B2/B3/B1C/B2C/B2B	Galileo	E1/E5a/E5b/E6a/E6B/E6C
GLONASS	L1/L2/L3		

Laser Technology

Jupiter's precise green laser, visible even in daylight, enables accurate measurement of points where using orange poles is not feasible. Additionally, the built-in camera records and displays the target point, making it easy to identify and mark the points that are too difficult to reach with naked eyes, making field operations faster and more efficient.

Super Datalink

Jupiter's compatibility has been further enhanced. The advanced datalink allows for seamless data exchange with the software of Corbin, Trimble and receivers of other mainstream brands, and supports a number of protocols, including Transparent, NMEA, and RTCM. With 1500 baud rate, the datalink is highly reliable and activatable under ideal conditions.

Full-Constellation Multi-Frequency

With 1088 channels and 50+ satellites tracking capabilities, Jupiter can get fixed in seconds, boosting your productivity. It also supports PPS (Pulse Per Second) for precise timing.

Visual Stakeout

With Jupiter's camera, surveyors gain a 3D visual view of Survey Master software's simply following the directional arrow and real-time distance, with the stakeout point, recorded and displayed on the screen, making it easy to identify and mark the points in one go, without moving the pole back and forth.

Auto-IMU

Jupiter is equipped with Auto-IMU, eliminating the need for manual calibration. The built-in IMU can automatically calibrate and store the calibration data, ensuring the accuracy of the data. It also supports 120° compensation in conventional, laser and visual modes.

OLED Color Screen

The OLED color screen visually displays the number of satellites searched, fixed status, and/or data, power and other information, which is convenient for surveyors to observe.

Jupiter Laser RTK

Jupiter Laser RTK is a high-end GNSS receiver that integrates cutting-edge GNSS, IMU, Laser and dual-camera technologies. Building on the advanced laser technology of the Universe Series, Jupiter also incorporates SinCGNSS's latest visual stake-out technology. This combination brings out immersive surveying and stakeout experiences, even in previously hard-to-reach, signal-blocked, or dangerous field.

Equipped with the latest K8 platform, Jupiter tracks 1688 channels for all running and existing constellations. The built-in IMU sensor supports up to 120° tilt compensation in conventional, laser and visual mode.
