

Guidelines for supplying and installation of Scale-out NAS (People's Majlis Datacenter)

Scale-out Network-attached Storage

- Solution must be scale-out, not scale-up.
- Solution must not be a SAN (Storage Area Network) product.
- Bidder to rack and test all hardware.
- Bidder to connect and cable manage according to instructions given by People's Majlis ICT.

Warranty and Use of Spares

- People's Majlis ICT requires on-site spares according to the list provided in the form.
- For delivery to be assumed complete, spares must be handed over to People's Majlis ICT.
- Spares to be replenished within 30 days after faulty component(s) are returned to bidder.

Configurations

- Network configuration at Top-of-Rack switches to be performed by People's Majlis ICT.
- Bidder to configure networking on cluster according to IP addresses given by People's Majlis ICT.
- Basic cluster configuration and testing to be performed by bidder.
- Network integration (AD, DNS etc.) of product to be performed by People's Majlis ICT.
- Snapshot configuration and defining quotas to be performed by People's Majlis ICT.

Migration

- Data migration will be carried out by People's Majlis ICT.
- Project is deemed completed after data migration has been completed and production file storage is officially switched over to new cluster.

Training

- Formal training, orientation and best practice guidelines from solution vendor to be provided to staff selected by People's Majlis ICT after project completion.
