- b) The contractor shall propose appropriate and practical sites for the construction, operation and maintenance of the groundwater wells after the site visit in coordination with the island council.
- c) The contractor shall produce a detailed design report on the monitoring wells, the reports shall be submitted for client approval.
- d) The contractor shall produce an EIA report as per the requirements of Maldives Environmental Protection EPA.
- e) Wells should be drilled close to each other so that the whole set of wells can be protected together, but considering the minimum space needed for the structural integrity of the system.
- f) The waterproof casing should be non-corrosive and guaranteed to last long in field conditions. For example uPVC or HDPE. Casing and wellscreens (slotted bottom part) shall be supplied by an ISO9001 approved manufacturing company.
- g) The internal diameter of the well shall be at least 5 cm so that it is possible to send a sampling pipe in while the data logger is deployed.
- h) The lining of the borehole should be watertight until it reaches the last 1m depth. At this depth, the lining should work as wellscreen (e.g. slotted). The bottom of the borehole should also be lined (with or without holes) to prevent silt from getting into the well.
- i) The top of the borehole should provide a secure way of closing so that (a) water does not enter the well from the top (b) The well is safe from vandalism.
- j) The salinity/temperature/pressure datalogger sensor ('sensor' hereafter) should be suspended above the bottom of the well, close to the bottom following the sensor manufacturers instructions.

- k) The sensor should be able to measure salinity, water-level (using hydrostatic pressure) and temperature (to convert salinity). The specifications should be as follows

Parameter	Unit	Range (minimum)	Accuracy (maximum measurement error)
Conductivity	mS/cm	0 – 60	±2%
Temperature	°C	0 – 50	0.2 units
Pressure	m (hydrostatic)	Up to 40	±0.1

- l) The sensor should be rated suitable to be submerged continuously in water under pressure up to 40m. (e.g. IP68 rating).
- m) The sensor should be completely corrosion resistant under highly saline conditions (e.g. seawater).
- n) The sensor data logger should be able to store the recordings of at least 2 years continuously (more than 20000 measurements). This operation should be completely unattended. The data logger operation should be battery-powered (with a battery life of at least 2 years)
- o) The data should be accessible from the well top while the sensor remains deployed (e.g. Built-in data cable or wireless). If using data cables, those should also be waterproof (IP68) and the cable end on the well top should be protected with a suitable waterproof enclosure.
- p) Each well should have a sampling pipe which is closed with a suitable endcap. Two units of movable sampling pumps should be provided (for the entire contract). These pumps should have a minimum lift of 5m and should operate with (rechargeable) batteries.
- q) The wells should be constructed as close to each other as possible so that the footprint is minimal. However, the spacing should be adequate to ensure structural integrity and proper operation.

- r) The set of wells should be protected from weather and vandalism. A suitable enclosure that can be securely locked should be provided.
- s) The depths of the wells are suggested to be:

Depths
2m
4m
6m
8m
15m

- t) The contractor should conduct a hands-on training session for a team of personnel selected by the client.
- u) A video clip explaining the procedure of (a) deploying, maintenance of the sensor and accessing data. (b) Sampling water from the sampling pipe/pump setup.
- v) Four well-sets in two selected islands should be constructed. Tentative locations and provided in the attached document
- w) The contractor shall submit an operation and maintenance plan
- x) Additional data on the aquifer of the island is found in the publication in the link, <https://www.environment.gov.mv/v2/en/download/10708>
