Job Opportunity

Post	Senior Software Developer	Reference	TradeNet-HR/J/2022/15
No of positions	01		
Term of Employment	Duration of the assignment is 1 (one) year from the commencement of work. Contract can be extended after performance analysis at the end of the term.		
Remuneration	Based on qualification and experience		
Scope of Work	We are looking for a Senior Software Engineer to create and implement functional software solutions. You will work with the product manager to identify software requirements as well as to drive operational and technical objectives. In this position, you should be able to operate independently with minimum supervision. You must be highly organized, problem-solving savvy, and have hands-on expertise with software development and agile methodologies. Your goal will be to create high-quality software that is in sync with user needs and corporate objectives.		
Qualification & Experience	4+ years of experience working in computer science. - Bachelor's Degree in computer science or equivalent. - Ability to learn and assimilate knowledge of complex software and systems. - Expert knowledge in databases and data modeling. - Experience with Scrum/Agile development methodologies. - Demonstrated on-the-job experience with project management principles, processes, procedures, and tools. - Demonstrated on-the-job experience with Cloud integration or processes. - Able to understand complex business processes.		
Responsibilities	- Develop high-quality software design and architecture. - Identify, prioritize, and execute tasks in the software development life cycle. - Develop tools and applications by producing clean, efficient code. - Automate tasks through appropriate tools and scripting. - Review and debug code - Perform validation and verification testing. - Collaborate with internal teams and vendors to fix and improve products. - Document development phases and monitor systems. - Ensure software is up to date with the latest technologies. - Build applications according to the design and provide designers with feedback and suggest tradeoffs when required. - Ensure the code follows the latest coding practices and industry standards. - Work closely with backend developers to understand and properly use the systems APIs Write both unit and integration tests and develop automation tools for daily tasks. - Challenge ideas and opinions to avoid pitfalls and inefficient solutions. - Perform all other related duties as assigned		

Desired Skills	• Good interpersonal skills and proven ability to work in a highly team-oriented environment.
	• Proven ability to function in a fast-paced, project-based, environment.
	• A demonstrated passion for learning new technologies.
	• A demonstrated passion for learning new exhibits, proficient written and verbal communication with customers both internal and having worked actively in building applications for the government will be an added advantage.
	• Development experience from concept, build, test, debug, redesign and delivery required.
