Job Opportunity

Post	Data Scientist - Consultant	Reference	Tradenet-HR/J/2022/27
No of positions	01		
Employment Type	Consultant		
Remuneration	Based on qualification and experience		
Scope of Work	We are seeking a Data Scientist to analyze and structure large amounts of unstructured data in order to identify trends that would aid in the improvement of Government Public Services. We will rely on you to develop data products that will enable various government agencies in transforming raw data into meaningful insights for the purpose of enhancing procedures and workflows. In this role, you should be able combine practical skills such as coding and maths with the ability to analyse statistics. For data analysis and interpretation, critical thinking and problem-solving skills are essential.		
Qualification & Experience	- Bachelor's degree in a related field - Minimum 3 years of experience directly related to the duties and responsibilities listed. - Capability to assess complex problems, interpret technical needs, and develop creative, integrated solutions. - A familiarity with current and emerging statistical, algorithmic, mining, and visualization approaches. - Knowledge in database querying and statistical computer languages: R, SQL, and Python - Experience using business intelligence tools - Excellent communication and presentation skills in addition to solid problem-solving aptitude.		
Responsibilities	- Assess the efficiency and reliability of data sources and data collection processes - Collaborate with multiple government entities to identify and develop data products - Present information using data visualization approaches to allow decision makers to discover areas that require attention or improvement. - Implement models and evaluate outcomes in collaboration with the engineering, solutions, and product development teams.		

Interested applicants are requested to email us your applications with the following documents before 1600 hrs on 29th August 2022 to careers@tradenet.com.mv
