## About Us

Golden Agri-Resources (GAR) is one of the world's largest seed-to-shelf agribusinesses.

For nearly three decades, GAR and its subsidiaries have been at the forefront of responsible palm oil production. Together with Sinar Mas Agribusiness and Food, our business operation in Indonesia, we grow oil palms with farmers and produce food and fuel for today and the future with sustainability at the heart of our operations.

**We deliver products to around 100 countries worldwide, including China, India and the USA as well as various destinations in Europe and the Middle East. GAR is listed on the Singapore Exchange.**

As a global leader in palm oil production, GAR manages more than half a million hectares of plantations, including smallholder estates, across Indonesia. Our downstream refining and specialty product facilities manufacture high-quality goods for the global food, oleochemical, animal feed, and bioenergy markets.

The vertical integration of our operations ensures efficiency, quality and sustainability across our supply chain, making us your partner of choice.

From product enquiry and customisation to fulfilment and distribution of orders globally, we provide you with a one-stop solution to meet all of your needs.

## What sets us apart

### Strong R&D

Science underpins the development of our plants, practices and products. Our R&D investments are achieving higher yields, combating climate change, and supporting healthier, safer, more sustainable global food diets.

#### SMART Biotechnology

**Centre:** We create better seeds and planting materials to improve yield, resulting in more palm oil production using less land. The Centre carries out a range of research activities ranging from production of oil palm clones to genetic mapping of oil palm plants.

#### SMART Research

**Institute:** We improve agricultural practices (e.g. resource use, breeding, crop protection) and work on research projects that help improve yield, promote environmental sustainability, preserve biodiversity and combat climate change.

#### R&D Centre, Marunda:

We develop new and reformulate existing food products (and its packaging) to support healthier and more sustainable global diets. Our R&D team combines technology, process innovation, and expert knowledge to create solutions for customers across the food industry.

### Safe, high-quality products

Our products are quality-certified to give customers peace of mind.

We maintain a high quality of crude palm oil thanks to strict turnaround times from plantations to mills for processing.

Food-grade palm and laurics such as our cooking oil, margarine and oleochemicals used in personal care products are prepared

at GAR's downstream facilities under stringent conditions. These end-to-end processing facilities, which employ state-of-the-art technology, are accredited by quality and food safety certifications such as ISO 22000, GMP+B2, Halal, Kosher, and others. We are also able to mitigate the presence of MOSH/MOAH\* within our supply chain.

\*MOSH/MOAH: Mineral Oil Saturated Hydrocarbons & Mineral Oil Aromatic Hydrocarbon

## Responsible production

**GAR is committed to achieving the highest standards of quality and integrity, embedding sustainability across all our operations.**

We benchmark our operations against various national and international sustainability standards and certifications to support our efforts in responsible palm oil production.

We want to ensure that our upstream and downstream palm oil operations are deforestation-free, traceable and bring benefits to the people and communities where we operate.

Close to **80,000 ha** of conservation area (HCV/HCS)

**Desa Makmur Peduli Api** programme long-term approach to reducing fires

**100%** plantations have social and community development programmes

Ensuring access to **education** and **healthcare** through the provision of schools and clinics

**99% Traceability** to the Plantation as of end 2023

Employment for about **100,800** worldwide

## From seed to shelf

### Seeds

Our Dami Mas seeds are known for high yields of up to 8-10 tonnes of Crude Palm Oil (CPO) per hectare. They have a 25 percent higher oil extraction rate and less disease compared to other brands. They harvest as early as 24 months after planting.

### Plantations and Mills

We manage more than half a million hectares of oil palm estates and close to 50 mills in Indonesia, located in Kalimantan, Sumatra, and Papua. These operations deliver an annual capacity of more than 14.4 million tonnes of Fresh Fruit Bunches (FFB).

### Core Products

In Indonesia, we produce crude palm oil and palm kernel oil, which are further refined in GAR's end-to-end processing facilities to create other high value-added products. Most of our products are derived from traceable, responsibly sourced palm and palm kernel oil. We also have destination processing facilities in large consuming countries – India and China.

GAR owns more than 30 leading consumer brands. Our branded products include household names such as Filma cooking oil in Indonesia,

Freedom sunflower oil in India, and Hua Feng instant noodles in China.

## Biofuel

Our technical experts focus on stringent quality control in production processes and are supported by a dedicated biodiesel laboratory, which results in fuel purity and consistent product quality. Our biodiesel plants are situated close to our downstream operations, ensuring a steady supply of raw materials as well as seamless integration of the feedstock to the production line.

## Oleochemicals

From our palm and palm kernel oils and fats, we produce natural palm-based oleochemicals. We offer an extensive portfolio of fatty acids, fatty alcohols, glycerine, and soap noodles manufactured using stringent quality control processes. We also develop innovative tailor-made products designed to meet each customer's needs.

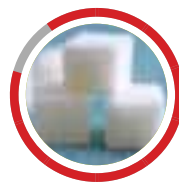

## Animal Feed

GAR manufactures animal feed supplements and additives using our palm-based fatty acids. Our range of high-quality fats is a nutritious source of energy for ruminants, swine and poultry, and is effective in helping farmers and manufacturers improve productivity, fertility and health of animals. The products meet internationally recognised standards and certifications, including GMP+ FSA and RSPO.

## Consumer Products

We own leading consumer brands in Indonesia, India and China. Our branded products include household names such as Filma cooking oil in Indonesia, Freedom sunflower oil in India, and Hua Feng instant noodles in China.

## Sugar Storage and Distribution

GAR markets, stores and delivers white sugar to customers worldwide. With our expertise in marketing and operations, coupled with an efficient supply chain model, we provide customers with fast, accurate, and timely solutions to manage price risk and supply of white sugar.

## Distribution and Logistics

We have integrated shipping and logistics capabilities that allow us to send our products direct to where customers need them – from our plantations to your doorstep. With access to a large, modern fleet of tankers and barges and an extensive distribution network, we provide customers with comprehensive and intelligent shipping and logistics solutions for palm oil and its derivatives.
