## **Artisanal cracked ice.**

Most widely used in drinks and for making shaved ice in Japan.

The natural and organic shapes reflect the Japanese aesthetic sensibility of wabi-sabi, which represents “beauty within simplicity and imperfection.” The musical clinking of melting Kachiwari in a rocks glass creates a heightened appreciation for the experience.

**Long rectangular-shaped ice**, ideal for Collins glasses.

One stick fills the glass, and because there is no gap between ice pieces, a smaller surface area of the ice comes into contact with the beverage.

This allows the ice to melt more slowly and retains the fizz of drinks longer. It is ideal for refreshing carbonated drinks, such as gin and tonics, and Japanese-style Highball cocktails.

# **Large-sized cubic ice.**

Ideal for spirits on the rocks or spirit-forward cocktails in wide rocks glasses. A variety of sizes as well as rectangular shapes are available.

Some cocktail bars in Japan trim the corners to create the effect of a brilliant-cut diamond.

With the least surface area of all shapes, **spherical ice** is slower to melt and dilute the flavours of a well-crafted cocktail.

It is ideal for those who enjoy whiskey on the rocks, and smaller spheres look lovely in large balloon glasses or champagne coupes.

This **large block of ice** is perfect for serving kakigori, a Japanese shaved ice dessert.

Its expansive surface area and size make it ideal for tempering and maintaining a slower melting rate, essential for crafting the perfect kakigori dessert.

Available in one size that suits most modern automatic kakigori machines, it ensures consistent and delightful results.
