Introduction

Establishment

Sunshine (Tianjin) Produce Limited was established in 1992, over than decades, Sunshine has been steadily grown into China`s leading food manufacturer, who brought healthy, natural food ingredients to the world. Sunshine Products range from of seeds, nuts, dried fruits Special from China oringin and related Deep-processing products.

Two Modern Facilities

In its 23000 ㎡ current modernization factory, Sunshine combines high technology with professional products and services which accredited quality leader and advanced management in this field. Due to its ever-increasing business, in year of 2015,Sunshine built a new facility which is over 36000 ㎡ and more automatic. Development and growth of Sunshine is backed up by the investment in high technology and state-of-the-art facilities.

Two International Subsidiary Companies

Sunshine products are exported and very well known to all over the world after its establishment. In order to supply best service and strengthen communication globally, in the year of 2003, Sunshine **Deutschland Handelsgesellschaft GmbH** was set up in Hamburg Germany. As one of the milestones, another branch **Sunshine USA Produce Inc** was established in New Jersey of the USA in 2016.Sunshine is in constant communication with our customers so as to assure full customer satisfaction and make sure our services are always in time.

Market Positioning

Sunshine Philosophy is of "Specialty, Safety and Reliability" to supply customers "Health, Quality and Delicious" products.

As one of the premium food ingredients manufacturer of seeds, nuts & dried fruits etc. We specialized on raw ingredients cleaning, processing, sterilization at beginning. With market expanding and nutrition tendency development, we enlarge to a wild variety of deep processed products like seeds,nuts & dried fruit snack, sprouting seeds, seeds protein, seeds oil and OEM/ Private label. Our products supplied to different food industry, food service, supermarkets ... etc. Sunshine has established the stable long business relationship with couples of esteemed world high rank food companies.

Quality Assurance System and Certificate

HACCP: Hazard Analysis Critical Control Point, Sunshine performs its daily operation in accordance to HACCP plan to guarantee the food safety.

BRC: Sunshine is accredited by British Retail Consortium (BRC) Grade A. It controls and manages quality from every step in the production from raw materials collection to finished product delivery. It keeps good traceability in the documentation to support the quality liability.

Member of INC: As Member of International Nut and Dried Fruits Council, Sunshine is qualified to provide its food ideas and faiths into the world.

OV-Kosher: Sunshine Products are cleaned, processed and prepared in order to be Kosher.

BCS Organic: With an increasing awareness of and concern for ecological environment issue, Sunshine started its organic projects in 1998 (according to EU regulation No.2092/91 and USDA/NOP-Final Rule). Sunshine covers the whole route from farmers to consumers with bulk products (10-850KG) as well as retail packages (30-2000g). The aim of the organic projects is not only to get certified premium quality products, but also to benefit farmer`s life.

Non GMO: Sunshine has Non GMO Project, all the products processed in Sunshine are Non GMO. The goods don't contain or derive from any genetically modified organism.

Gluten Free: Sunshine has Gluten Free Project, all the products processed in Sunshine are Gluten Free.

Allergen Control: All food material causes allergenic reaction including: all different clinical symptoms to respiratory system, gastrointestinal system, central nervous system, skins, muscles, and bones, etc. Anaphylactic shock may happen if serious, and causes death. Sunshine makes use of two separated facilities, has very strict management procedure for Allergen products from raw material to finished products. Sunshine also has training classes for all the staffs to prevent allergen cross contamination.

Facility Impression

Hi-Tech Automatic Processing Lines

Sunshine transforms raw agricultural materials into high quality food ingredients with modern Hi-Tech processing. From the raw material process to the end of finished products packing line, our professional machineries, plus CCP Critical Control Points like metal detector and X-Ray machine ... etc, they all help to support our aim, make sure all the ingredients from Sunshine are clean, safe, healthy and nutritional. In our new facility, most of the lines are running automatically, controlled by PLC, few labors are involved.

Heat Treated&Roasting

Nowadays, the physically cleaned products have not been satisfying for the "Ready-to-Eat" customers anymore. Low microorganism level is crucial to food industry. Therefore, Sunshine has solved this problem by washing and heat-treating the products. By virtue of Sunshine's automatic washing system as well as temperature and time controlled heaters, which has several stages, in each stage, the temperature can be adjusted individually to ensure the even heating and customize the quality standard, Sunshine can offer various levels of heat-treated, Roasting products to customize different products.

Facility Impression

Steam/Vacuum Pasteurization Line New Technology

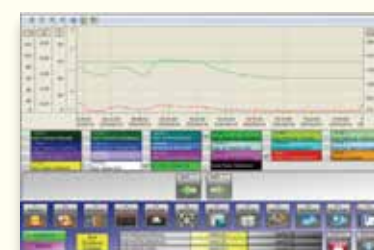

Steam Pasteurization Advantage

Pasteurization effectively kills microorganisms while protecting the natural taste, organic status and appearance of the product. It is natural, chemical-free and gentle on the product.

- A** Steam pasteurization effectively kills: Pathogens (Salmonella, E.coli, Enterobacteria) Spoilage microorganisms (mold, yeast), Infestations (insects at all stages of their lifecycle)
- B** Validated that dry saturated steam is much more effective than wet steam or superheated steam
- C** Treatment of products range includes nuts, seeds, herbs, spices, dried fruit, botanicals and so on
- D** Treatment of products of all shapes and sizes: Whole kernels or pieces, leaves, roots, cut, diced, sliced and ground products and powders
- E** Validated 7-log pathogen reduction for a wide range of products
- F** No moisture pickup and minimum impact on the organoleptic qualities
- G** Precisely adjustable pasteurization temperatures from 60°C to 120°C
- H** Organic process all the time, no use of any chemicals
- I** Modular construction built for treatment chamber sizes ranging from 2 to 12 bins covering a wide range of throughput, specially designed stainless steel process bins can hold up to 700kg(1'500 lbs) for each
- J** From conditioning to pasteurization to cooling, the process can be fully automated
- K** Integrated in our process, the pasteurizer separates raw room to clean room (GMP) preventing recontamination.
- L** Complete automatic inspection record and traceability of all critical parameters for each batch.

Industrial PLC (SIMATIC) for optimal reliability

Complete inspection documentation and traceability of each circle.

Logistic&Storage

Close to Tianjin Sea port : Sunshine' s two facilities are built in Tianjin Economic and Technological Development Zone, adjacent to Tianjin Port and equipped with developed network to assure safe & timely transportation.

Professional storage & cooling warehouses: Sunshine has 15400+ m² warehouses, among them, 5800 m² cooling warehouses are temperature controlled between 4 to 10 °C and humidity less than 65%, which enables the products remain at its freshest capability until further processed. The warehouses are divided into raw material zone; semi-finished products zone and finished products zone .We obey first in and first out policy, which guarantees the freshest raw material is processed.

Technology center

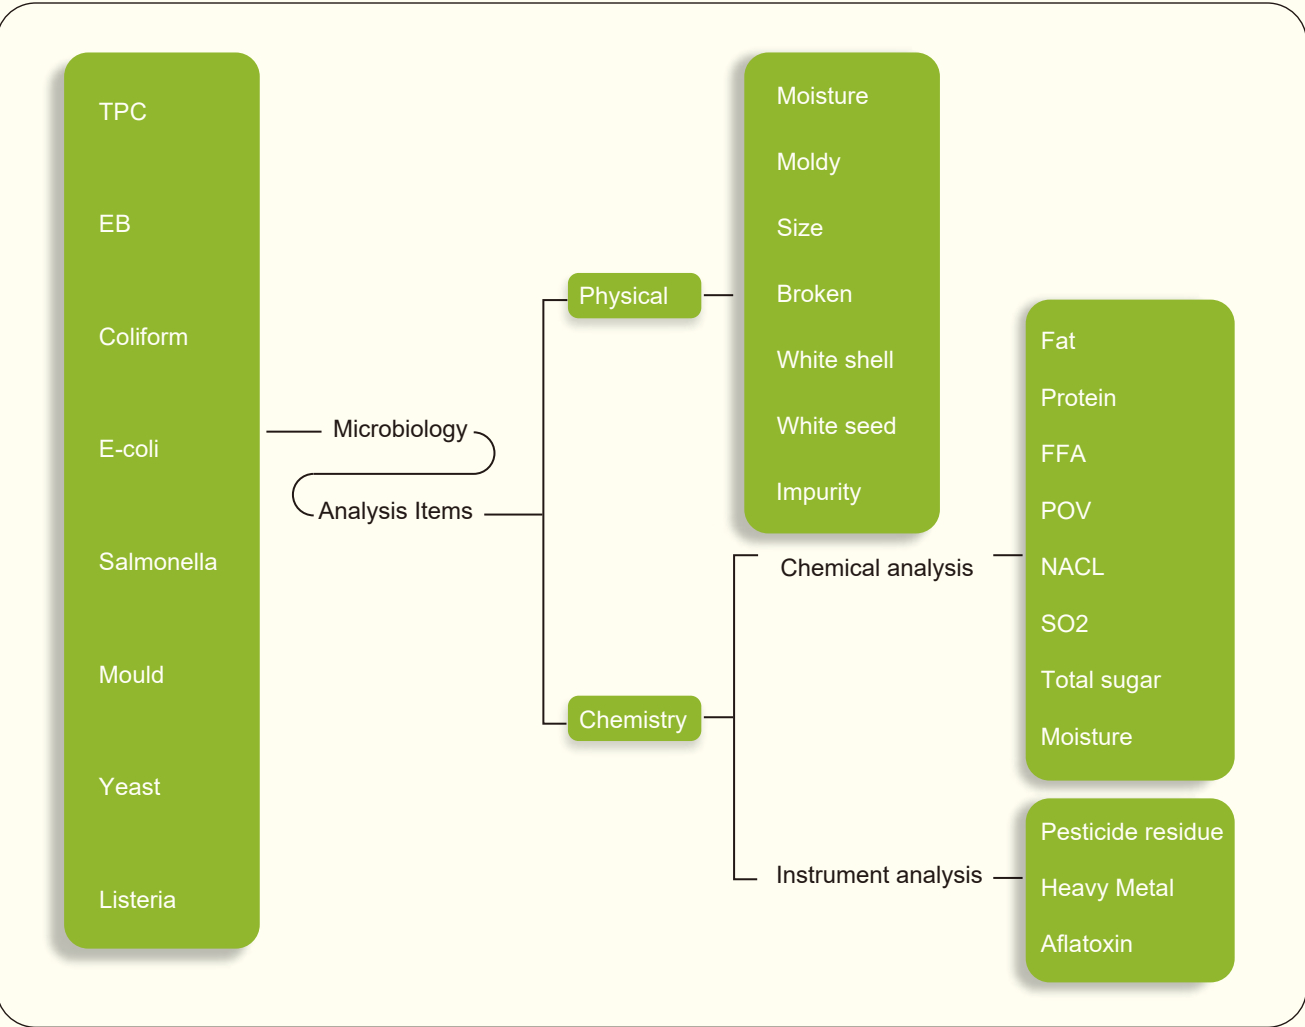

Sunshine has the top technology center in the seeds industry around the world. The technology center is fully functional for product analysis and new product research & development. All the items of products could be inspected internally in a short time. That's important for quality insurance. New product research & development can greatly extend market and increase the product's value.

1 .Analysis

● Analysis Items

Three labs cover all the items that related to seeds industry.

- **Physical lab** can give the quick judgment on quality of the raw material and final products.
- **Chemical lab** could analysis the inner characters by advanced and automatic equipment, such as FFA, POV, and also items that reflect the farming process, such as pesticide residue and heavy metal.
- The items of **Microbe Lab** cover the common microbe(TPC, EB, E-coli, Y&M) , Pathogenic bacteria(Salmonella, Listeria)

2.R&D

This center encourage any innovation and could help the wisdom turn into value. The research center can keep Sunshine ahead in seeds industry.

The research focus on these aspects:

- Extend the usage of products and increase the product' s value, such as usage of by-products, application in other food fields, such as bakery and breakfast cereals.
- Functional products: Protein powder and oil from pumpkin seeds.
- Snacks: Energy bar, Nutritional bar...etc

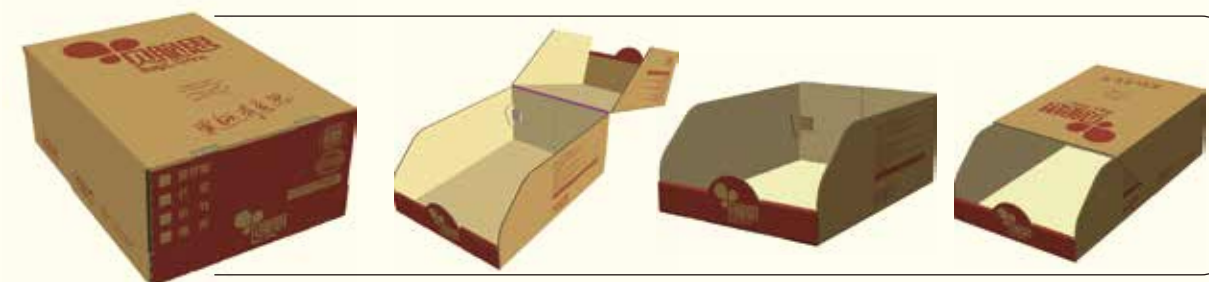

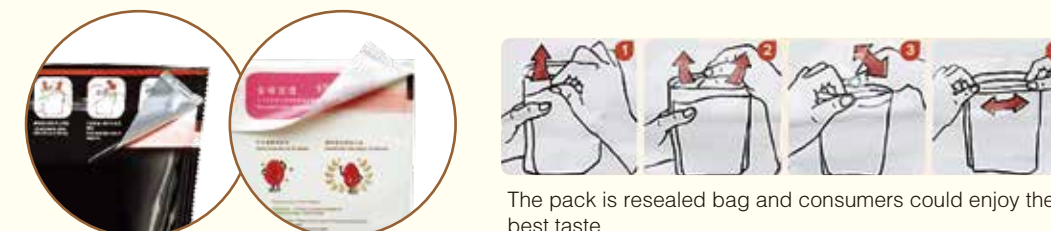

Private Label-Sunshine will make your dream come true

Sunshine's retail packaging workshop has equipped with the advanced packing machine which has the ability to pack from 20g to 3kg retail package. Meanwhile, we can also offer various kinds of designs, colors and materials of the packing such as mini-stabilo bags, gusseted bags, flexcan bags and stabile bags. For almost all kinds of bags, we can provide the Nitrogen injected version which can preserve the quality much better than the normal package. Depend on such a versatile workshop, Sunshine is competent to undertake the OEM business from all over the world.
