Saeplast Americas Inc. is proud to announce the launch of its new product line, the Saeplast PE DMPC1450 meat log container, for all your food processing solutions.

This container is designed to provide a safe and efficient option for handling large, processed meat logs, making it the perfect solution for businesses in the meat industry. In this article, we'll be discussing three key benefits that our new product brings to the table.

## 1. Employee and Food Safety

One of the key features of the Saeplast PE DMPC1450 meat log container is its focus on employee and food safety. The container is made from food-safe and employee-friendly polyethylene plastic that is lightweight and has a smooth wall design. This design reduces the risk of injury and improves employee safety, making it an ideal option for businesses that want to keep their employees protected. Additionally, the container is 100% food safe, meaning that it won't contaminate the processed meat logs, ensuring that the final product is of the highest quality and up to industry standards.

## 2. Cost Savings

The Saeplast PE DMPC1450 meat log container is also a cost-effective solution for businesses in the food processing industry. The ease of cleaning the container will result in savings in water and sanitation costs compared to traditional steel options. Furthermore, the elimination of the need for corrugated cardboard containers, which need to be purchased, stored, assembled, and disposed of, creates daily savings and reduces the environmental impact of the business. The Saeplast containers' ability to be safely stacked also opens up valuable floor space, further reducing costs and improving employee safety.

### 3. Low Total Cost of Acquisition

The Saeplast PE DMPC1450 meat log container is designed to offer the lowest total cost of acquisition, making it an attractive option for businesses in the meat industry. The container comes in varying quantities and can be transported in different-sized trucks and containers. This versatility enables businesses to select the option that aligns with their requirements, resulting in reduced costs and increased operational efficiency.

The Saeplast PE DMPC1450 meat log container is an excellent solution for businesses in the food processing industry. With its focus on employee and food safety, cost savings, and low total cost of acquisition, this container is the perfect option for businesses that want to improve their operations and ensure the highest quality of their products.
