

Integrated Water Treatment Solutions

The meat, poultry, and seafood industries consume high volumes of water every day for processing. With production and feed prices increasing, the strain on our natural water resources, and challenges to comply with strict regulations, facility managers are continually looking for ways to decrease costs and to conserve resources.

At Chem-Aqua, our industry-leading experts will evaluate your facility and recommend a water treatment program that will help address the unique heating, cooling, and process water requirements. Our comprehensive line of products help reduce corrosion, scale deposits, and microbiological fouling while meeting USDA, FDA, NSF, and CFIA regulations. We also manufacture and support a full line of pretreatment, reverse osmosis, and filtration equipment to keep systems operating at maximum efficiency and conserve resources.

**Improve
Operating Efficiency**

**Reduce Energy
& Water Consumption**

**Reduce
Carbon Footprint**

**Improve
Odor Control**

Program Benefits

Effective water and process solutions to help:

- Maximize system protection
- Ensure regulatory compliance
- Improve reliability
- Increase system efficiency
- Reduce total costs
- Manage odors
- Enhance sustainability
- Optimize water treatment costs

Complete Solutions Provider

Full service water treatment solutions:

- Liquid and solid water treatment products
- Automated feed and control equipment
- Pretreatment, filtration, and reverse osmosis systems
- Biofilm cleaning and monitoring
- Wastewater
- Odor control
- Biological drain maintenance systems
- Alternative and reclaim water sources
