

- **MAGIK** cleans grain before going to market: Corn, Milo, Soybeans, Wheat, Barley, Rice, Sunflowers, etc.
- **MAGIK** contributes to the reduction of costly dockages for (FM) foreign material (broken kernels, dirt and dust) in the grain mass.
- **MAGIK** contributes to the reduction of aeration costs and hot spots in the grain mass, the amount of insect life. (Insect larvae are deprived of smaller grain particles and dust that serve as nutrients.)
- **MAGIK** helps increase available storage space in bins and trucks (up to four pounds extra grain storage area for each pound of foreign material removed).
- **MAGIK** promotes reduced drying time.
- **MAGIK** screening may be used as an essential component in animal feeds.
- **MAGIK** cleans grain damaged from shipping and improves the quality for export.
- **MAGIK** contributes to the removal of crumbs from pellets and fines from flaked products.
- **MAGIK** contributes to the reduction of sands and stones smaller than the grain.

NOTE: Variables in grain quality and moisture content may affect results obtained.

A **MAGIK KLEENER** grain cleaner contributes to the quality, safety and efficiency of your grain storage, as well as maximizing your profits by reducing dockage fees when you go to market. Additionally, you will save on operating expenses due to the gravity design which uses no electricity and has limited moving parts further contributing to low maintenance.

MAGIK KLEENER'S zig-zag design consists of multiple reversing sections creating the necessary agitation needed for efficient cleaning without outside power requirements.

MAGIK KLEENER serves both farm and commercial needs for grain cleaning/screening. The easy access doors allow for quick cleaning and switching of screens for different products in only a few minutes from one convenient location. With minimal installation requirements the gravity screener may be attached to an elevator leg, wet or dry load out, an elevator head house, on top a dryer, under conveyors or inside a building. In most any location where your material flows downward, this cleaner can be installed.
