

SiteSense

AI-driven energy optimization
for industrial refrigeration

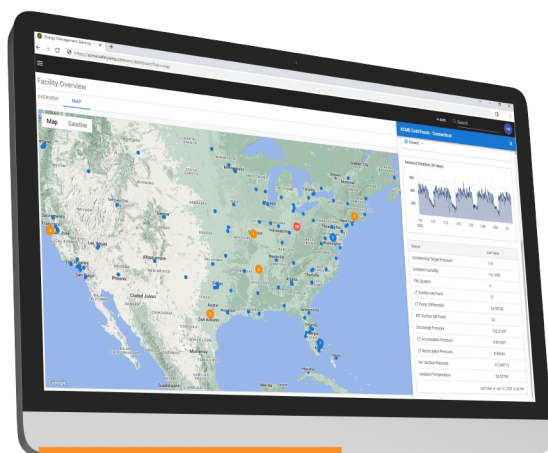

SiteSense Energy Management software helps companies save on energy costs, track energy goals, reduce consumption, and improve sustainability across all sites.

POWERED BY ARTIFICIAL INTELLIGENCE

- Sends alerts based on system and equipment deviations, allowing your team to react more quickly.
- SiteSense artificial intelligence continuously learns and applies ideal control parameters.
- Built-in Learning Management System with comprehensive refrigeration & system optimization training.
- Allows you to benchmark energy savings across your entire site portfolio.
- Identify underlying energy drivers, improve performance, and reduce demand.
- Centralize energy, production, PLC, and sensor data for each location.

Our dedicated team of energy experts will work alongside your operations and energy teams to ensure successful deployment and utilization of the SiteSense platform.

SiteSense integrates energy intensity modeling, data from ERP systems, and both meters and sensors into one central energy optimization platform granting you immediate enterprise-wide visibility.

Birds-eye business intelligence for the entire site portfolio

We Champion Your Efforts

- > Onsite Energy Commissioning
- > Energy Model Configuration
- > Hardware/Sensor Deployment
- > PLC & Control Integration
- > Analytics and Alerting
- > User Setup & Training

Dashboards, Reports, and Analytics

- > Regional & Site Performance
- > Portfolio-Wide Leaderboard
- > Building & Production Efficiency
- > Savings & Goal Performance
