

MANGIATORELLA

ITALIAN MINERAL WATER

THE ITALIAN WAY OF LIFE

The Italian philosophy of life is based on love, simplicity, company, wellbeing, cheerfulness and tradition. A life that every day rediscovers the pleasure of enjoying what nature best offers. Exactly like Mangiatorella, the still mineral water known in Italy since the 1800s for its superior quality.

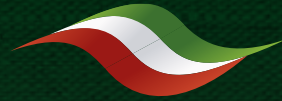

Drinking Mangiatorella Mineral Water means slaking one's thirst with a delicate, harmonious and cool taste, it means choosing a light water, which cleans the palate and heightens the flavor of food and, thanks to its precious natural elements, aids digestion.

This is our Italy, this is Mangiatorella.

The background of the image is a dense forest of tall, slender trees with vibrant green foliage. Sunlight filters through the canopy, creating a warm, golden glow and long, soft shadows on the forest floor. The trees are closely spaced, and the overall atmosphere is peaceful and natural.

NATURE, TRADITION AND WELLBEING MEET

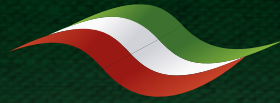

Mangiatorella is a natural mineral water, that is, bottled without chemical or physical treatment as it comes straight from the spring, situated in the woods of the Calabrian Serre Park, in southern Italy, 15 kilometers away from the nearest urban center. Moreover, it boasts a constant composition throughout the seasons, determined only by its slow subterranean journey of pure rainwater through ancient rocks. Since 1904, when it was bottled for the first time, much research and scientific experimentation have confirmed its beneficial properties.

A photograph of a hand holding a small amount of water, with a single drop falling into a body of water, creating ripples. The background is a blurred green landscape. A dark green semi-transparent banner is overlaid across the middle of the image, containing the text "THE RIGHT CHOICE FOR PURITY" in white serif font.

THE RIGHT CHOICE FOR PURITY

“It is extremely pure as shown by the very low level of nitrates,,

The position of the spring and the feeder basin, situated in an unspoiled area of hundreds of hectares, gift Mangiatorella an insuperable purity, testified to by a level of nitrates among the lowest in the world (<0.5 mg/l). The nitrates, in fact, reach the water owing to man's interference, fertilization, intensive animal rearing, dispersion of civil and industrial waste, etc.) and their absence or limited presence is an index of purity and wellbeing.

Ideal for children

The almost total lack of nitrates, associated with an extremely low fluoride content (0.1 mg/l) make Mangiatorella an ideal water for newborn babies. In fact, Mangiatorella has been recognized by the Italian Ministry of Health as a suitable water in preparation of milk for bottle feeding

THE RIGHT CHOICE FOR THE BODY

**“ Thanks to silica, it is good
for the skin and the hair ”**

Thanks to a suitably high silica content (.....), Mangiatorella Water contributes to keeping joints and muscles youthful and to recharging and detoxifying the body. Silica also intervenes in hair structure, reinforcing it and protecting it against pollution and the sun, and it is good for the skin since it contributes to the production of collagen, favoring a decrease in wrinkles and slowing cutaneous ageing.

**“ It helps digestion
owing to a low PH ”**

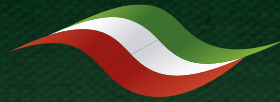

Mangiatorella is slightly acidic and therefore helps digestion and contributes to preventing oxidization. The PH of natural mineral waters is generally in the 6.5 to 8 range, that of Mangiatorella is positioned at little more than 6, which testifies to its correct amount of acidity.

THE RIGHT CHOICE FOR WELLBEING

**“ It contributes to wellbeing
and digestion ”**

Owing to its extremely low fixed residue, Mangiatorella is a light water, and therefore is more useful to the body and to its wellbeing since it favors a more rapid hydric exchange and diuresis, it facilitates the elimination of metabolic waste products through the urinary system and purifies the organism, intervening positively in the phases of digestion.

**The lower the fixed residue
the lighter the water**

The fixed residue at 180°C gives an estimation of the content in terms of mineral salts, so that the higher it is, the more salts are dissolved in a liter. In mineral waters it does not exceed 500 mg/l, that of Mangiatorella is only 67.4 mg/l.

Ideal at table

Drinking Mangiatorella mineral water means slaking the thirst with a delicate, harmonious and fresh flavor, it means choosing a light water, which cleans the palate and heightens the taste of food.

Mangiatorella mineral water is bottled in different containers with various formats and capacity, conceived and created to be consumed at table and outside the home, and is available both as still and sparkling. Formats for restaurants, as for our glass bottles, have a design that combines elegance and tradition, and satisfies the needs of restaurateurs who wish to communicate their choice of quality and prestige. Also PET bottles of 1 litre valorise restaurant tables, thanks to their modern and ergonomic design. The knurling and relief of the “1904” stress the tradition, the transparency of the label communicates its naturalness and freshness. The elegant and practical 1,5 and 2 litre formats in PET are suited to family consumption, since they are provided with an ergonomic ring that facilitates the grip and prevents spillage, and with a cap that unscrews in less than 1/3 of a turn. Changes in lifestyle have led to the concept of smaller formats in PET, created for those who are often out of the home or practise sporting activities: the 33 cl pocket format, destined to adults and children, and the 50 cl format come provided with cap and safety valve.

AN IMPORTANT ITALIAN COMPANY

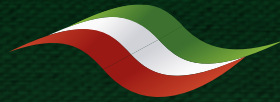

HIDRIA

MANGIATORELLA

Cavagrande

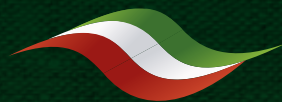

An impeccable manufacturing process controlled in every phase contributes decisively to conserving the characteristics of Mangiatorella Mineral Water, from collection to bottling, from packaging to distribution. Mangiatorella Mineral Water is the most appreciated in southern Italy, and its products are exported into the US, Canada, Malta, Australia, China, Russia, Israel, Latvia, Libya, Azerbaijan, UAE.
