CEO Greeting

“A company contributing to the improvement of national health through developing a wide range of functional foods and leading innovations in Korea’s functional foods market”

Developing a wide range of functional health foods, we support improving our nation’s health and leading innovations in Korea’s functional foods market.

With complete quality control from ingredient selection to product manufacturing, we develop, produce, and distribute a variety of excellent functional foods with a focus on our customers.

Our business also includes utilizing high-functioning herbs, forest goods, farm products, and marine products to commercialize products for a better quality of life.

Making our land’s natural ingredients more effective and elevating their place in the market, we are committed to becoming a leading company safeguarding the future of functional foods in Korea and the world.

Main Facility, Equipment

Pharmcobio Co., Ltd. works in industry-academy collaboration with the Department of Bio-Functional Material of Kangwon University to research plant sources, forestry resources, and marine resources of our land and commercializes functional foods beneficial to human health.

Medicinal sources selected through numerous research and testing are transformed into delicious, easy-to-digest jelly sticks and liquid products only after they undergo a strict verification process for food safety.

GMP, HACCP Manufacturing Areas are specialized for manufacturing jelly sticks and liquid functional foods.

■ HACCP Certified(Safety management standards, Hazard Analysis, and Critical Control Points)

Our scientific and systemic food safety management analyzes potential risk factors that can be detrimental to food safety in the entire processes of production, manufacturing, and distribution, eliminating such factors or setting critical checkpoints at production stages to ensure food safety.

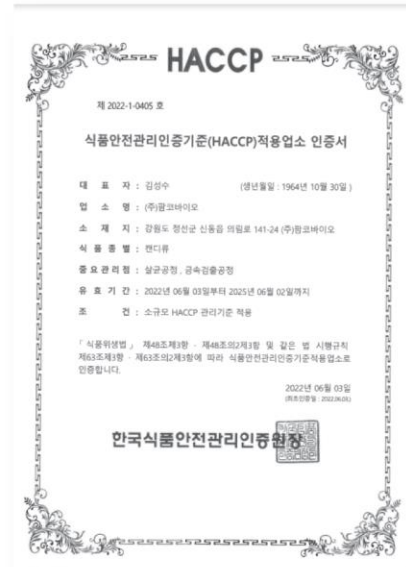

■ GMP Certified(Quality health food manufacturing standards, Good Manufacturing Practice)

We follow the organized and systematic process set by this international standard for manufacturing quality-assured functional foods for the entire manufacturing and quality management, including the layout and facility of the manufacturing facility, covering ingredients, manufacturing, packaging, and shipping.
