MISSION AND VISION

Pioneer of healthy living, creating a natural lifestyle

Our mission is to provide healthy, nutritious and delicious products,
which can be easily prepared and enjoyed with confidence,
and cultivate green concepts in our life.
In our constant pursuit of quality and innovation, we have achieved international
certifications such as ISO9001, ISO22000, Islamic HALAL Certication,
HACCP (currently applying for SQF III) and so on. We've also won the certifications
by vegetarian associations in the United States, Europe and the United Kindom

Our vision is to always care for consumers need and taste under the
promise to keep everything as natural as possible. We vow to develop delicious
products and provide you an enviromentally friendly lifestyle.

BUSINESS PHILOSOPHY

Innovation

More than 20 years of experience in research and development, in pursuit of excellence, and striving for innovation
Aiming to produce vegetarian foods by whole natural formula.we supply delicious and diverse products for non-vegetarians, ovo-lacto vegetarians and vegan as well. At Vegefarm, you can always find a diet that suits you.As a leader in vegetarian and vegan food, Vegefarm's R&D and manufacturing teams offer a variety of vegetarian foods that connect with the healthy eating trend around the world and transform vegetarian diets into a stylish lifestyle.

Environmental protection

Protect the earth, saving animals
A little change in your diet may affect the earth's ecology. When you reduce the consumption of meat, you help reduce not only air, water and land pollution caused during the animal-raising process but also excessive hunting and land misuse, making the Earth healthier and enhancing animal welfare.

Health

Health starts from the selection of great ingredients
Vegefarm carefully selects the best ingredients from the sources. We use premium grade soy protein as raw materials, which contains no antibiotics and growth hormone. Every ingredient is under strict inspection by our quality assurance and procurement units.

Service

Advance with the times, producing healthy, delicious and easy prepared vegetarian cusines is our mission
From Homemart to Vegefarm Corp. (Vegetarian Food MFG), we have constantly invested in the latest machinery and equipment to produce tasteful and quality food and to meet international certifications such as ISO2200 and HACCP, etc and we are currently working on SQF III. Vegefarm welcomes anyone with different requirements such as OEM, customizing and developing specific products to statisfy your needs.

Ingredients Characteristics

With the simplest ingredients to make the most advanced products.

Raw materials are selected with the following characteristics, which coincides with the Mission and Vision of Vegefarm:

Textured Soy protein: We use only non-genetically modified soy protein. The soybean we use contains sufficient and complete amino acids essential to human body. It also holds higher protein content than meat without cholesterol.

Wheat Protein: Wheat protein is rich in amino acids "Glutamine" and vitamin E. It can help you maintain good health.

Konjac: Konjac is also known as "elephant yam". Rich in water soluble dietary fiber – glucomannan, konjac helps improving intestinal peristalsis. Because of low calories and strong water absorption, konjac can increase satiety, in avoid of excessive food consumption and calories.

Canola oil: Imported from Canada, the canola oil that we use as frying oil in food production has high heat resistant point and is not hydrogenated. Vegefarm replaces oil whenever total polar compounds reach TPM 22%, a standard more stringent than the 25% regulated by law.

Soy sauce: At Vegefarm, we use extra virgin soy sauce made with ancient formula by first washing and cooking the black beans, soybeans and other raw materials. The so-called "brewed soy sauce" is rich in such organic substances as amino acids, carbohydrate, organic acids, esters and so on. It even contains protein, calcium, phosphorus, iron and othernutrients

Whey protein: Pollution-free high-quality milk imported from New Zealand is low-temperature processed to retain the nutritional value of whey protein.

Seaweed: Seaweed is widely used in our products. After on-site visits and inspections to all the major manufacturers, we select seaweed cultivated in the intertidal areas for its purity and quality. Natural wild-grown seaweed appears in brownish black. And the deeper the color, the better its quality. Intertidal seaweed is well known for its low calorie, high fiber,and diverse flavor.

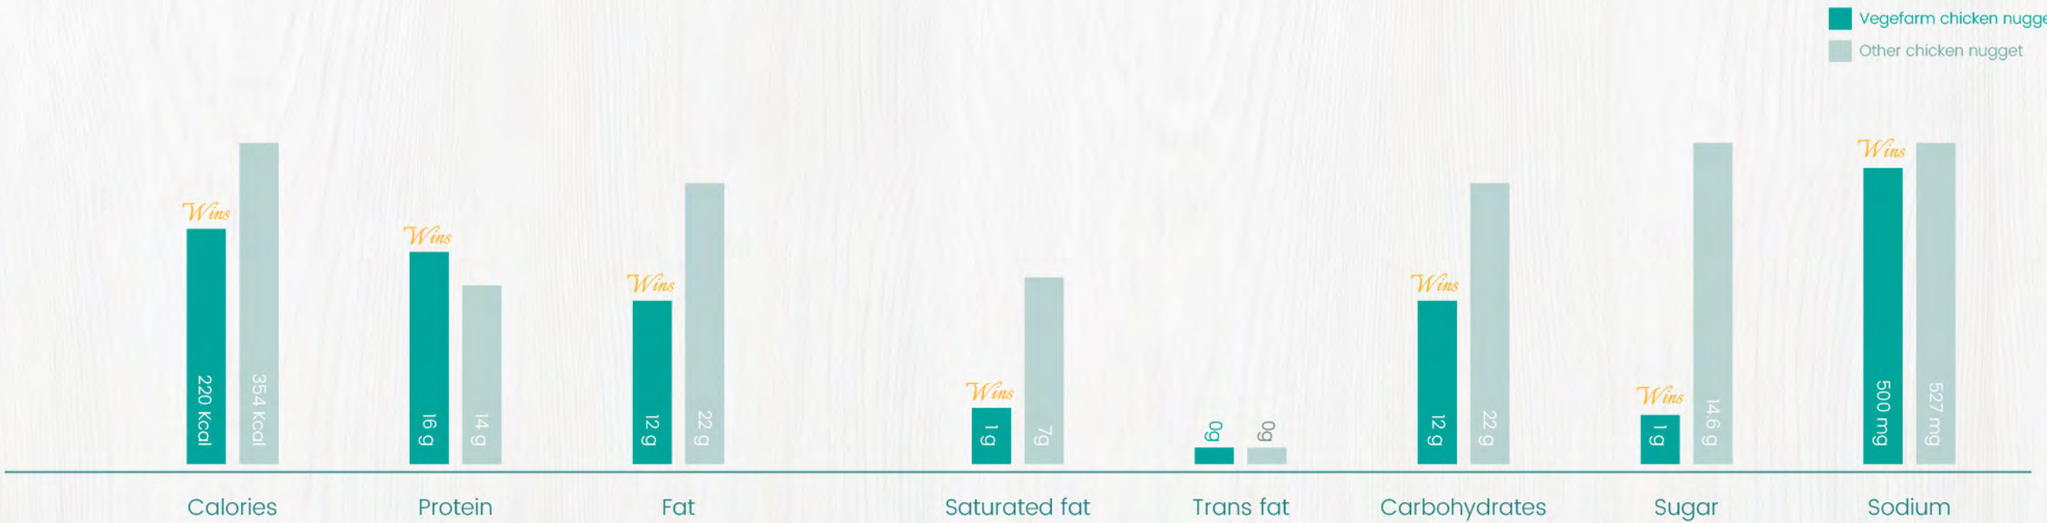
Taiwanese mushrooms: At Vegefarm, we select only handpicked mushrooms to reduce soil content and retain their perfect shape. Mushrooms soaked with Vegefarm's unique formula release amazing aroma.

Our Advantages

Vegefarm makes you healthier

Vegefarm products offer better nutritional contents than many other commercially available products. The following is a comparison of Vegefarm products with other commercially available products:

In comparison with other commercially available chicken nuggets.Vegefarm chicken nuggets help reduce the intake of calories by 38%, fat by 45%, saturated fat by 86% and sugar by 93%



Quality control

It's our responsibility

Quality control system:
All the products must go through four (4) checkpoints as below:

- ✓ Raw material inspection
- ✓ Process testing
- ✓ Microbiological testing
- ✓ Shipping inspection..

Water:
Purified water is used in our food production. Our filters can remove all heavy metals, bacteria, viruses, pesticides, trichloromethane, suspended solids, impurities, minerals, etc., to make purified water, which is then sterilized by the use of UV lamps. Quality control staff conduct water quality test regularly for total number of bacteria, and escherichia coli, coliform, pH, and residual chlorine.

Air quality control:
Quality control staff periodically detect the number of airborne bacteria to ensure the best air quality in the production environment. Moreover, UV sterilization lamps are used to eliminate bacteria in the air during the non-production time.

Inspection of raw materials:
In addition to rigorous purchase inspection, manufacturers are required to provide inspection reports (pesticide residues, aflatoxin, preservatives, monochloropropanediol, non-genetically modified, heavy metals, microorganisms, etc.) according to the characteristics of raw materials.

Strick check of personnel

An annual general health checkup is conducted on all employees. Food preparation personnel must additionally go through screening for such diseases as hepatitis A, hand skin disease, rash, abscess, trauma, tuberculosis and/or typhoid.

Individually quick freezing (IQF):
The IQF process can lower the core temperature of a product to the frozen state (-18°C) 30 to 40 minutes, to effectively reduce microbial growth without adding any chemicals. The IQF process can also maintain moisture in the product, large amounts of the original vitamins, minerals and other nutrients. It also ensures the shape, freshness and taste of the products.
