BY-PRODUCTS

To ensure that nothing is wasted after the slaughtering of buffalo, we have put up a modern Rendering Plant that produces high quality By-Products from the bones and fat derived from the healthy carcasses.

PFS:

In this unit we are producing PFS (Poultry Feed Supplement) which is dried at high temperature to ensure negligible presence of moisture content, and further packed in poly bags without any foreign particles.

Tallow:

Same plant is also giving good output of Technical Animal Fat (Tallow) with the low FFA content.

Skin/Hide:

The unit is also producing high quality buffalo Hides using automated de-hiding machines which ensure the smooth removal without any cuts.
