

PREMIX

Premix is a homogeneous finely ground mixture of microadditives and filler used for the enrichment of mixed odders and protein-vitamin-mineral supplements. Most of them are produced in powder and as additives are introduced into compound feed and feed mixtures in the amount of 0-1,0% of their mass. The composition of premixes includes: vitamin preparations, trace elements, antibiotics, enzyme preparations, tranquilizers, medicines and + flavoring additives - all this mixes well with fillers (millet bran, meal, etc.)

WHEAT BRAN

Wheat bran contains a large number of vitamins and elements important for the body. So, this product includes vitamins A, E, group B, it is a source of fiber. Bran is a good adsorbent; by using it in the animal's diet, a sufficient level of watering should be ensured. Bran is involved in the formation of hemoglobin. Feeds rich in bran can improve blood quality, which affects the overall health of the animal. In addition, this product improves metabolic processes. Bran is useful in regulating the processes of digestion, the activity of the nervous system. Therefore animals gain weight better and do not get sick. At the same time the quality of meat becomes better, the volume of fat mass decreases.

LOGISTICS INFORMATION

PREMIXES

Packing in a polypropylene bag
with an insert of 25 kg

COMPOUND FEED

Packing in a polypropylene bag
from 10 to 40 kg

WHEAT BRAN

Packing in a polypropylene bag
with an insert of 20 kg
