

Microcapsulated Biofungicide

Mikoks® is a natural plant protection solution developed with microencapsulation technology. It can be used in the fight against powdery mildew and gray mold in every season and helps to obtain better crops even under difficult conditions.

Problem & Opportunity

Offering a unique combination of long-term control and continuity of this control, Mikoks® ensures healthier crops and higher yields.

Mikoks® has both preventive and curative effects by affecting different periods in the life cycle of the pathogen.

All these features offer producers the advantages of lower cost and higher and quality yields.

Microcapsules Stays Inside

Reduce fungicide costs, because Mikoks® is a large spectrum fungicide

It is reliable for endurance management with its new mode of action

Ensure equal or better quality than synthetic pesticides on arrival

Create a unique chemical-free branding opportunity
