

## Post Harvest Solutions

Nanomik's new formulation is effective in lowering and suppressing the production of the Mycotoxins in a time dependent manner

## Our Solution

Nanomik's new formulation was effective in lowering and suppressing the production of the Mycotoxin species in a time dependent manner comparing to the untreated samples.

## Biological Silo Fumigation

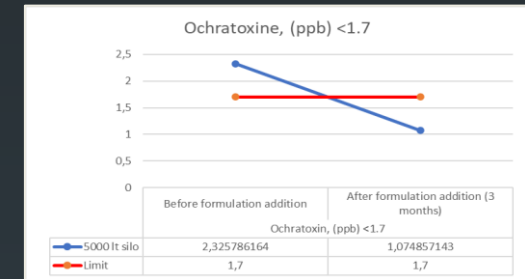

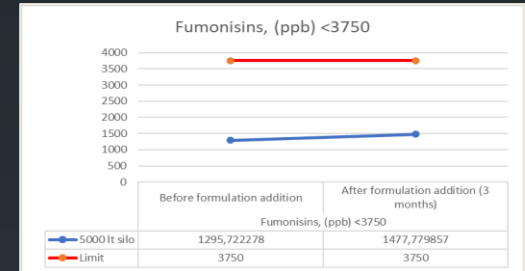

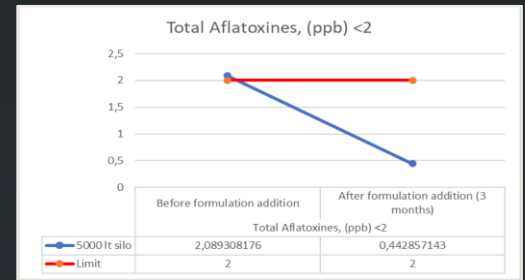

It designed a controlled release systems contains plant based active molecules to reduce fungi and mycotoxin load on corns.

### Unique Selling Points

- 1. Easy to adapt:** Every silo which built with loading canale can use this device
- 2. Wide spectrum effective:** This system can reduce
- 3. Safe:** Don't leave any toxic residue
- 4. Decomposable:** Easily decompose in normal temperature and environmental conditions

## Time-Dependent Change of Mycotoxins Level
