

HELIOS

COMPREHEND ELITE

Our Latest. Our Greatest.

Helios Comprehend Elite

Helios Comprehend Elite is the most advanced generation of our Comprehend suite of products: the first and currently only voice tone analysis data product for the financial industry.

Built upon the success of previous generations of Helios products, Comprehend Elite gives you the power to learn more about firms based on the tone of their executives' voice; raising the bar to offer expanded equity coverage, significantly more data per event, new event types, and increased alpha.

With these enhancements, Comprehend Elite supports an increased number of improved trading opportunities to maximize your portfolio.

Precise Tonal Feature Data

Comprehend Elite nearly doubles the number of tonal features over previous generations of Comprehend, increasing the number of neurolinguistic features per analysis from 104 to 204.

Improved analysis algorithms have been demonstrated to generate over 60 basis points of excess return using simple trading strategies.

Expanded Equity Coverage

Helios Comprehend Elite covers all U.S.-based equities, allowing you to explore tonal features of more than 4,500 public companies' executives.

Tonal Fingerprinting for All Executives

Tonal elements are available for each key company speaker along with speaker name and job title. This new feature unlocks new insights per event (e.g., voice tone of the CEO vs. the CFO) and enables temporal comparative analyses (e.g., the voice of the executive before and after an announced merger).

Introducing New Event Types

Comprehend Elite expands beyond quarterly earnings calls to provide tonal analytics for additional types of events, including corporate presentations, multi-party conferences, investor days, and special announcements.
