REPLICHROME

Totally Rad! Inc. has created **Replichrome**, a group of Lightroom and Photoshop presets for digital shooters who still relish the look particular traditional film stocks could provide. The company collected 13 popular film stocks, including Fuji 400H, Kodak Portra 400 and Kodak TRI-X, and shot in every lighting condition and with every camera possible. Then, using Noritsu and Frontier scanners, the team created 134 total workflow presets. Each preset gives you additional control over tone, color, grain and density. List Price: \$99.
