REPLICHROME SLIDE

Replichrome was created out of the desire to match authentic film grains in the digital photography era. **Replichrome II: Slide** goes a step further, replicating the look and feel of modern and discontinued slide films by Fujifilm, Agfa and Kodak. Re-creating realistic slide colors and contrasts, each preset is based on film developed by Richard Photo Lab based in Hollywood, Calif., and can be tweaked to match your personal developing tastes in Lightroom or Photoshop. List Price: \$99. **Contact:** Totally Rad, www.gettotallyrad.com.
