Cerebral palsy is one of the devastating disorders in medicine. This relatively common problem occurs in babies, lasts for a lifetime and creates disability ranging from mild to severe. The lesion cannot be cured but the consequences can be minimized with proper treatment.

The past decades have witnessed a great deal of change and improvement in the management of CP. Procedures have been modified to be more effective and at the same time minimize the impact of therapy, bracing and surgery on the child's life. However, this changing and increasing knowledge did not reach many parts of the world. This book aims to provide concise, up-to-date information on the basic aspects and new approaches to treatment of musculoskeletal problems of children with CP. We hope that it will be useful in the correction of problems that cause lifelong disability for millions of children worldwide.

Global-HELP Publication
For more information about Global-HELP and other publications, visit our web site at global-help.org

Global-HELP (GHO) is a non-for-profit, non-political, humanitarian organization that creates low-cost publications to improve the quality of health care in transitional and developing countries. Global-HELP’s objective is to create and distribute publications using desktop computer technology. This technology makes possible the production of low-cost books, brochures, pamphlets, and CDs that are affordable to health care providers in countries with limited resources.
