Bring order to the complexity of creating and running software at scale:

// mission & vision

Go is designed to be efficient at both creating and running software at scale. Bringing order to complexity.

Go accelerates development from initial prototypes through planet-scale production systems. Go keeps developers productive with fast builds, great tools, and easy deployment. Go scales to massive code bases with thousands of contributors, exemplified by modern open source and enterprise development.

Go is designed to make efficient use of your resources. Go benefits from the high performance, reliability, and tooling of a statically typed language. Its strong support for concurrency enables applications to scale to massive, high-performance systems, exemplified by modern multicore cloud computing.
The Go project and its community are built on six core tenets. Each of the six values complement one another to inspire a programming language and ecosystem that is stable, powerful, and effective.

### Thoughtful
- Deliberate and considerate.

### Simple
- Clear and precise.

### Efficient
- Do more with less.

### Reliable
- It just works.

### Productive
- Realize your vision, faster.

### Friendly
- Accessible and welcoming.
Go was created by a team of programmers who value honest, open communication, without exaggeration or excess. Our dialogue with one another and the broader community adheres to the following:

## Tone of Voice

### Gophers Are
- Concise
- Genuine
- Friendly
- Direct
- Thoughtful
- Humble

### Gophers Are Not
- Verbose
- Dubious
- Exclusive
- Ambiguous
- Reactive
- Haughty
The audience for our communications.

The Go project is currently focused on three key audiences. These segments have different priorities and varying understanding of Go's value and purpose. Thus, the messages that resonate with each group will vary as well. As you develop communications for the Go project, consider your audience and the following.

1. Potential & New Programmers
2. CIOs, CTOs & Tech Leads
3. Existing Go Users
What resonates with our constituents.

// key messages

1. Potential & New Programmers

Go’s primary audience is the community of existing programmers who are seeking a language that increases their productivity and enhances the developer lifecycle.

In addition, Go is a great option for those just learning programming.

- Developer productivity of a dynamic language with the speed, safety, and reliability of a static language
- Easy to learn & readable
- Has a vibrant, welcoming community, spanning open-source developers, startups, large companies, and universities
- The language for the Cloud
What resonates with CIOs, CTOs & Tech Leads.

// key messages

2

CIOs, CTOs & Tech Leads

The technical leaders within an organization have to invest in a team and language that will optimize their systems and produce the best results for their business.

+ The language of cloud programming
+ Ready for production use
+ Developer productivity of a dynamic language with the speed, safety, and reliability of a static language
+ Low adoption costs
1.3.3 What resonates with Existing Go Users.

// key messages

Existing Go Users

Communications need to be developed for existing users of Go. As a programmer grows technically, their potential for community contributions grow as well. Many of them could become leaders in their communities and contribute back to the project.

These messages are helpful reminders to these members about the benefits of Go.

+ Solves big engineering problems
+ Participate in a vibrant, welcoming community, spanning open-source developers, startups, large companies, and universities
+ Backed by Google, who understands and supports needs specific to open source communities and Go
+ High demand for Go programmers
section two

visual identity
Our logo represents our team, the project and the community. It follows the brand’s core philosophy of not overengineering or complicating a solution that can otherwise be simple.

A modern, italicized sans-serif typeface combines with three simple motion lines to form a mark that resemble two wheels in rapid motion, to communicate speed and efficiency. The circular shape of the letters hints at the eyes of the Go gopher, allowing the mark and the mascot to pair well together.

Please follow these guidelines as you implement the logo into any Go communications.

When using the Go logo, make sure to not crowd the logo with text, images or other visual elements. Use this reference to determine the proper padding. The perimeter surrounding the logo is labeled with the ‘o’ from the logo. In order to give the logo proper breathing room, nothing should occupy this area.
Acceptable logo use.

The Go brand is intentionally open and flexible when it comes to its use. The logo can be used with a variety of colors and backgrounds. The Go blue, aqua, black and white are the most common uses. The gradient is meant to be used as a background only and not intended for the logo itself.

- Black on white
- Blue on white
- Aqua on white
- White on black
- Yellow on black
- Pink on black
- White on gradient
- White on high-contrast image
- Secondary color on gradient
2.0.2

Unacceptable logo use.

Although this brand is highly flexible in how it’s used, it’s important to avoid inconsistency in the way people experience the brand. Here are a few tips.

Do not choose a color that would render it difficult to read.

Do not stretch, pull, elongate or distort the logo in any way.

Do not use the Go name or logo in a way that implies that Google is affiliated with or has endorsed your product.

Never use the Go name or logo as the most prominent element on your page.

Do not add to, subtract, rearrange, or otherwise modify it.

Do not alter or use the Go name or logo in a way that may be confusing or misleading.
Go's color palette is led by the primary blue and supported by aqua and light blue. Use black as a high-contrast foundation.

The secondary colors are vibrant and inviting. They are to be used as an accent color, and not as a replacement of the primary colors.

As the Go brand is highly flexible, you may introduce new accent or supporting colors as needed, but please use prudence and err on the side of simplicity.
Consistent use of the Work Sans typeface for headlines and subheads will contribute to a unified Go brand.

**Work Sans**

AaBbCcDdEeFfGgHhIiJjKkLlMm NnOoPpQqRrSsTtUuVvWwXxYyZz

- **Black**
- **ExtraBold**
- **Bold**
- **SemiBold**
- **Medium**
- **Regular**
- **Light**
- **ExtraLight**
- **Thin**

**Headlines & Subheads**
Black and Bold are generally reserved for prominent copy or to emphasize body copy.

**Callouts & large-scale copy**
Extralight and Thin should only be used for callouts or large scale text over 36pt.

Selected for Go's headlines and subheads, Work Sans provides a significant array of weights, from Black to Thin. The weight range allows the user to visually communicate with greater optionality. The modern, slightly whimsical typeface pairs perfectly with Go's friendly and approachable brand personality—alongside the Gopher and the bright, vibrant color palette.

It is available for free at [fonts.google.com](http://fonts.google.com)
The fonts we use.

Roboto for body copy will ensure that longform and small copy is easy to read.

Body copy

For small and long form copy, please use the Roboto font family. All weights are acceptable, however Light should be used only in cases when the font is 14pt or larger.

Roboto is a contemporary sans serif typeface designed for readability. The font was created by Christian Roberson, an interface designer at Google. Google describes the font as "modern, yet approachable" and "emotional". Roboto shares many characteristics of the Go brand—it is unassuming, practical and highly flexible.

It is available for free at fonts.google.com
We encourage using the Go font for source code to ensure clean and legible code renditions.

Regular  *Italic*

Source code

The font family, called Go, includes proportional- and fixed-width faces in normal, bold, and italic renderings.
section three

the mascot
Using our beloved mascot.

// the gopher

The Go gopher was created by renowned illustrator Renee French. It has become a beloved mascot for the Go brand. The Gopher is a reminder of the approachability and fun that comes with the Go brand and language.

When appropriate, it can and should be used on communications that are Go branded. But the gopher is not the logo. It should not be used instead of the logo, nor placed too close to the logo.
Creating your own gopher.

// model sheet

The model sheet is a illustration guideline for those who are interested in developing their own adaptations of the gopher.

For additional background and guidance, please watch the creator's Character Study video here: https://www.youtube.com/watch?v=4rw_B4yY69k
