

BugTrack system

BugTrack is a great solution for small and mid-sized computer companies. The primary goals of BugTrack are to be flexible, quick and user-friendly. These attributes are reached with the use of modern technology.

BugTrack can be used for project management or like issue tracking system.

About

BugTrack system is designed for project development support. During development a project completes many phases. Typical phases are establishing project specification, analysis, development, test and release. Our system can be useful for a team in the development, test and release phases.

BugTrack gives project managers the advantage of having an overview of his developers and the issues assigned to them. Issue management makes your development process more effective, provides you detailed statistics about time spent by programmers fixing problems, number of issues in individual projects and their severity.

Say good bye to sending tasks via e-mail, writing notes on paper or using Excel sheets as a tracking system. Use BugTrack and improve your business today!

Main idea

Create new, original, flexible and expandable issue tracking system for mid-sized businesses. We want to reach this by analyzing current issue tracking systems, finding their weak points and making our system stronger where others are not. Our main goal is to create a user-friendly, easy to use system, that will make a programmer's life much easier.

Future plans

Our primary goal now is to create a first release and obtain user feedback.
