Main Conclusions from the paper prototype session:

- Change GIVE/GET GAIN buttons to something more coherent to users (maybe use meaningful symbols?).
- “My Account” button appears in too much screens, should be placed only in one screen, and should change it to “Profile” button.
- When searching Gains add Tags to the upper part of the screen, add title, promoting Gains that help closing loops, and maybe using “Trends” instead of “HOT Stuff”
- Maybe using Templates of Gains?
- Make the whole interface more appealing.
- Adding Pictures to certain Gains.
- Drop the “Gain Moshe” button, and change to a more logical button name.
