5	SENYONGA Salym	09/U/12312/PS	Systems Analyst

1.0 Introduction

Early child learning is definitely a prime asset. Our dedicated application is to aid tutors and parents truly enjoy teaching young children. We have made it our mission to ensure that your child's first school experience will be happy and successful.

2.0 Background to the Problem

The currently widespread system of teaching in nursery schools emphasizes the use of teaching aids such as charts, straws, Manila paper, to mention but a few, in order to visually illustrate anything being taught. With the introduction of mobile phones, nursery teaching can be made simpler and more accessible to nursery school pupils when they are away from school. Parents, whose nursery-going children disturb a lot, will be saved this disturbance since the children would enjoy this visual teaching aid

3.0 Problem Statement

The problem this project will address is scarcity of portable, interactive nursery teaching aids that can be used out of school, in addition to nursery pupils disturbing their parents due to lack of what to do.

4.0 Objectives

1. Main Objective
Increase access to portable, interactive nursery teaching aids that can be used out of school.
2. Other Objective
Keep the nursery pupils busy while away from school
Reduce stress on the part of the parents.

5.0 Methodology

Mobile phone usage

The current statistics indicate that each family with nursery-going students have at least one mobile phone. With this in mind, a mobile application would be the best option for meeting the away-from-school-learning objective

6.0 Outcomes

- Increased away-from-school-learning for nursery pupils
- Interactive and enjoyable learning
- Reduction in parent stress levels
