

PeaceTube

take a look at the other side

Current app state

- ◉ Running server
- ◉ Generates unique tokens and sessions id
- ◉ Start talking with other random online user
- ◉ Explore the world - see all online users by first name, likes and other optional information (age, country)
- ◉ Facebook app for desktop conversations

Changes from milestone 1

- ◉ We build our own separate server
- ◉ Likes and flags were added to this version
- ◉ Textual chat postponed to milestone 3
- ◉ Changed video technology from webRTC to Flash

Security

- ◉ Encoded sessions
- ◉ Conversations in HTTPS protocol
- ◉ DATASTORE IS NOT SECURED ON APP ENGINE

Privacy

- ◉ The app keeps minimum data on users
- ◉ Users can control their public information
- ◉ No last name for users
- ◉ Can report on abuse ("flag")

Pilot

- ◉ We gave the app for several friend from places around the world. The main use case was to allow people creating video conversations with other people they haven't met before without giving their personal information.
Here are what we came up with:
 - Good – People felt that their privacy was kept
 - To improve – Position of the video, lack of interest, audio issues
- ◉ Next pilot will be to a larger group of people (Peacetube beta testers)

Future planning (by priority)

- ◉ Experience – Most important is to improve the UX. Make the partner's video larger and the user's smaller.
- ◉ Usability - Add help and explanations page that will also encourage users to start video chats, add textual chat.
- ◉ Important features – Manage push notifications, add “searching” filters.
- ◉ Nice to have – Add interest by adding relevant information regarding the user's locations, add games, allow saving favorite people.
