

# MYSZKOWSKI

"*Cryptographie indéchiffrable*" is a French book on cryptography written by Émile Victor Théodore Myszowski (a retired French colonel) and published in 1902.

His book was based around the description of a cipher that the author had invented and claimed (incorrectly) was "undecipherable" (i.e. secure against unauthorised attempts to read it). It was based around a form of repeated-key transposition.

Text is written horizontally into rows and taken off by key order.

P: Incomplete columnar with pattern word key and letters under same number taken off across.
