

Family Link Guide for Families

A guide to setting digital ground rules for your family.

In today's world, digital devices are everywhere — and they're always demanding some sort of attention — if we let them. For families, understanding and creating digital ground rules at home is an important step in educating children about their relationship with technology. But for many children or teens, this can feel like a “power play” on the part of their parents — an exercise in control. It doesn't have to be this way.

By making it into a conversation, you can help your child understand why these rules are important. The topics below focus on features available via Family Link, but discussions about technology use can be helpful for any parent. Family Link is an app that helps parents stay in the loop as their child begins using an Android device. Parents can use Family Link on their Android, iPhone, or Chromebook devices*.

*For the child's device, Family Link runs on Android devices running version 7.0 (Nougat) and higher. Devices running Android versions 5.0 and 6.0 (Lollipop and Marshmallow) may also be able to run Family Link. Parents can run Family Link on iPhones running iOS 11 and higher. Family Link also works on select Chromebook devices.

Visit families.google.com/familylink/device-compatibility and our Help Center for more details on device compatibility.

Help guide your child to good content

Wouldn't it be nice to know how much time your child is spending in that educational app vs. the apps they download? Family Link offers tools for parents, such as daily, weekly, and monthly app usage reports, so you'll have a better idea about how your child is spending time on their device.

Content restrictions and app approvals

When a child accesses the Google Play Store, they can browse games, movies, shows, books, and more. Additionally, Family Link enables parents to:

- Restrict the types of content visible based on ratings
- Require approval to download content (free or paid)
- Review an app's information when a download is requested to find out whether it contains ads, in-app purchases, or permissions you might care about

Talk with your child about the different content ratings that exist (such as "E for Everyone" vs. "Teen") to explain why these restrictions exist for different age levels, and help them understand what kind of content you think is appropriate for them.

App activity reports

It's much easier to have a talk with your children about technology if you know what they love to do with their devices. Is your child a chatter? A gamer? An avid reader? Talk to your child about which apps and games they enjoy the most, and see where they spend their time with Family Link's app activity reports. These reports provide a breakdown of how much time your child spends on each app on a daily, weekly, and monthly basis.

Hide apps

You might decide the right amount of screen time for your child depends on what they're watching, playing, or learning. If activity reports show your child is using a specific app too much (like their favorite new game), you can temporarily hide it from their device. Discuss with your child whether or not they feel the amount of time they're using it is healthy, and explain to them why you're asking them to take a break. None of their app history (such as game progress or high scores) will be deleted — the app will simply be hidden until you decide to make it available to your child again.

When discussing apps with your children, talk to them about which apps and games they enjoy the most. It's a great opportunity to get to know what they're interested in, while also making sure they balance their usage of these apps appropriately with things like homework, helping out around the house, or just playing outside.

Keep an eye on screen time

Deciding how much time your child should spend using their device is up to you, but there are ways Family Link can help you set limits.

Screen time limits

Family Link lets you set daily screen time permissions for your child's Android device. This is a great opportunity to take a moment with your child and discuss what might be a reasonable amount of time to spend on devices each day, and agree to limits that work for each of you. Both parents and children can see how much screen time is available, making it possible for parents to take an active role in managing their child's technology use, or for your child to be proactive in managing it themselves.

Set bedtime

When it's time for bed, it's important to minimise distractions to help your child get a good night's sleep. Family Link allows parents to set a device "bedtime" during the hours that their child is supposed to be resting. From having the energy to do their best on the football pitch or the focus needed to ace a test, it's important that children understand the mental and physical benefits of a device-free bedtime. You could also use it as an opportunity to explain to your child why you make the effort to "cool off" from your own devices when getting ready for bed, too.

Remotely lock a child's device

When it's time to do homework or sit down for family dinner, parents are able to lock their child's device with the Family Link app. It's a great chance to have a discussion and decide as a family when it's okay to use devices, and when they should be off and out of reach. Being able to lock a device remotely, in real-time, provides parents with opportunities to explain their actions and reinforce family decisions, allowing for mentorship and supervision to happen simultaneously.

See where they are

If you have older children or teens, you might have had an experience where you're standing in the living room and you ask yourself, "Where's my child?" Usually, they are just being quiet in their room, or you forgot they were across the street with their friends. Still, it's nice to know that if they are carrying their device and it's on, you can use Family Link to help locate them.

Turn on device location

Talk to your children about why it's helpful for you to see their device's location.

Adjust settings as your child grows older

As your child grows older, you can change many of their account and device settings within Family Link. Have a conversation with your child about these changes, and how they help prepare them to manage their own accounts and device use in the future.

Make a Family Commitment

While Family Link can help you stay in the loop as your child explores, it's also helpful to give children the information they need to be smart, confident explorers online. Be Internet Legends is a program that teaches digital safety and responsibility for children. Consider starting a conversation with your child about these topics by signing the Be Internet Legends pledge together. You can also direct your children to play Interland, a free, web based game that reinforces the topics of building strong passwords, being kind online, avoiding phishing and scams, and being mindful of one's online reputation. They can link directly to Interland from "Tips for Families", located in the menu of the Family Link app.
