

Address Validation API

Improve checkout, delivery, and operations with reliable addresses.

Improve user experience

5-10% of all last-mile deliveries fail.¹ Help improve delivery success by assisting users in entering deliverable addresses at checkout or account creation.

Reduce costly errors

Increase customer loyalty by minimizing delayed deliveries, lost sales, and chargebacks from catching and correcting invalid addresses early in the process.

Get enhanced accuracy

Benefit from accessing points of interest in Google Maps Platform's Places data for enhanced accuracy.

“

Address Validation helps us identify and resolve problematic components of the bad addresses, which in turn improves business efficiency. We have more granular information on the errors. For example, if it was Line 1 and/or Line 2 that is problematic, so that our Operations team can rectify it accordingly.

Senior Software Engineer, Slerp

SLERP.

Benefits of Address Validation

Powered by the Best of Google

[Address Validation](#) is built on Google's foundation of world-class infrastructure to deliver the stability and scale your enterprise needs, along with 24/5 support.

Rich, dynamic places data

Enable users to search the 200M+ places of interest in Google Maps Platform's Places data, and apply metadata, such as residential or commercial distinction.

Scalable performance

Reliable, high-performance infrastructure that scales with you—globally.

A single platform

No need to manage multiple vendors for an address capture solution: access Autocomplete and Address Validation in one place.

A complete address capture platform

128 Midland Ave
1282 21st St Unit 202
12817 Sycamore Blvd

Autocomplete

Get address entry started **faster** and transactions completed by predicting places as users type.

Address Validation

Finish address entry more **reliably** by validating and correcting each component.

Address Validation in Practice

Use cases across industries

Retail and Ecommerce

Offer shoppers an easy way to correct addresses, reduce failed or mis-deliveries, and minimize complications caused by address errors.

Transportation and Logistics

Help drivers save time, predict delivery challenges, and reach the consumer's door with greater precision and confidence.

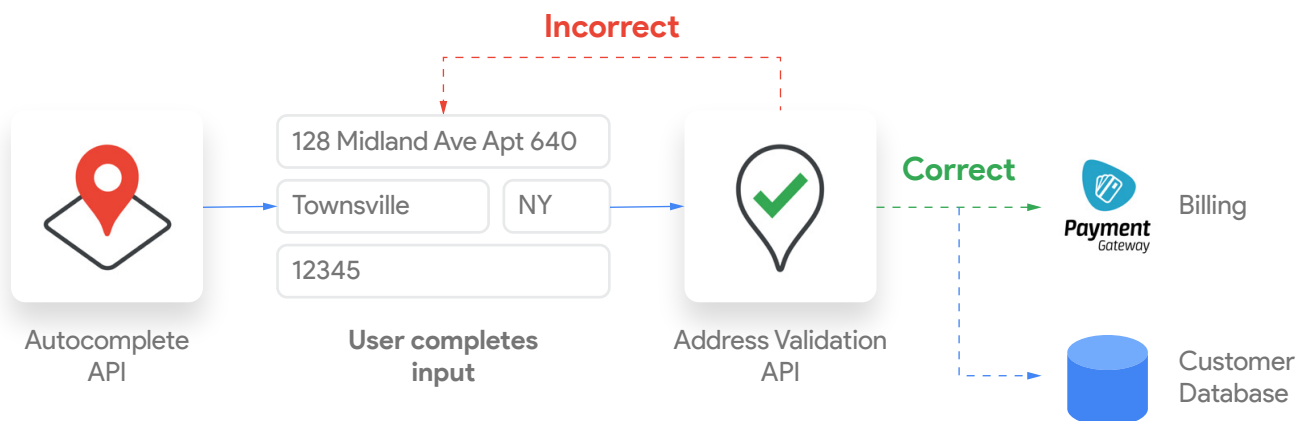

Financial Services and Insurance

Help authenticate cardholders and validate new accounts with proof-of-address. And potentially detect fraudulent sign-ups.

Easy to implement

The Address Validation API is designed for quick and easy integration with your existing processes. Below is a sample implementation guide for ecommerce checkout. Additional resource guides are available in the [Architecture Center](#).

Get Started Today

How to get started

Address Validation API is generally available to anyone with a Google Cloud account.

Learn how to [set up your Google Cloud project](#) before using the Google Maps Platform APIs.

[Try the demo!](#) See examples of how the API responds to common address mistakes, or enter your own address to view the API response.

Dive deeper into adoption resources in the [Architecture Center](#). For example, how to process a high volume of addresses, or how to implement for ecommerce checkout.
