The FlushFit ring must be screwed into the Dryboxx using the drywall screws supplied

The Sonance FlushFit adapter is designed for a standard 12.5mm plasterboard ceiling

If the ceiling construction is more than 12.5mm, (acoustic ceiling, MDF boards etc), there are optional available rings to bridge various needed heights (the exact ceiling thickness must be specified!)

You must use joint tape (net) or the supplied fleece into filling/spackling compound to bridge the gaps before applying final topping compound
