

INSTANT DEMO

WHICH WAY WOULD YOU RATHER WATCH MOVIES?

- ▶ This is how major motion pictures look on a standard 16:9 screen or any flat panel TV. Recognize those annoying black bars?

- ▶ This is how major motion pictures look in true cinema widescreen format using a Panamorph lens system on a wider 2.40:1 screen.

With a Panamorph lens, you gain over 30% more brightness and resolution and an 80% larger image. With no black bars.
