Videoprojector Side Mirror System Small

This system is designed for side installation of the projector, offering a flexible alternative to ceiling mounting. The projector rests on a stable support base with integrated mirror.

This solution allows the image to be redirected while keeping the projector positioned laterally. It is ideal for installations where ceiling or frontal mounting is not possible.

The structure ensures stability and precise image positioning. Suitable for both professional and dedicated home cinema environments.

Features

- > Dimensions: 250 × 285 x 330 mm
- > Base fixing screw size: M6
- > Bracket weight: 3 kg
- > Color: Black

The base is equipped with a high-performance mirror featuring 96% reflectance.

The mirror is a FIRST SURFACE MIRROR, ensuring no ghosting or double-image effect. Its angle can be tilted, raised, or lowered to suit installation requirements.

This allows accurate image alignment in different room configurations. Height-adjustable feet compensate for uneven or non-level surfaces.

The result is a precise, stable, and highly adaptable projection system.
