Natural Environments 20

20.1 **Purpose**

Plan Change 9 with proposed deleted text have strikethrough with red highlighting

This chapter is subject to the following plan changes: Plan Change 9 with proposed new text are underlined with green

Plan Change 9 section 42A recommendations with new text being underlined and deleted text with strikethrough

Plan Change 9 section 42A update recommendations with new text being underlined and deleted text with strikethrough

a. This chapter of the District Plan relates to Significant Natural Areas, significant trees or groups of trees Notable Trees, peat lakes, wetlands and peat lake catchments.

highlighting

Significant Natural Areas

- b. The Act identifies the protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna as a matter of national importance. This chapter of the District Plan identifies areas of significant indigenous vegetation, biodiversity and habitats of indigenous fauna which qualify as Significant Natural Areas - these areas can be held in public and private ownership or ownership may be split.
- c. The sites are identified on the Planning Maps and are listed in Schedule 9C: Significant Natural Areas in Volume 2, Appendix 9. The significance of a site is based on the ecological significance of its indigenous vegetation. The sites were assessed using the criteria for determining significant indigenous biodiversity contained in section 11A of the Waikato Regional Policy Statement (May 2016). Two classifications of SNAs have been identified:
 - i. Floristic SNA' (fSNA): Distinct areas of wetland or terrestrial vegetation communities dominated by naturally occurring indigenous plant communities or where naturally occurring indigenous vegetation define the primary aspects of the natural area.
 - ii. 'Corridor/indigenous fauna habitat SNA' (cSNA): Areas that are able to be delineated by topographical or vegetation features (such as gully systems) which provide significant fauna habitats, including At Risk or Threatened indigenous fauna species, or provide connectivity and ecological buffering to a regionally or nationally important Significant Natural Area.
- d. As restoration efforts continue in the City, additional Significant Natural Areas may be created. These will be added to Schedule 9C through changes to the plan through the First Schedule process under the Act.
- e. Significant Natural Areas include
 - i. The Waikato River corridor and gully systems.
 - ii. Peat lakes and wetlands.
 - iii. Remnant indigenous vegetation or trees.
 - iv. Other areas that contribute to indigenous biodiversity.
- f. Threats to Significant Natural Areas include the reduction or loss of habitats due to contamination, disturbance, destruction, invasive weeds, vertebrate pests and surrounding land uses. Maintaining the City's indigenous biodiversity is challenging because:
 - i. Areas and habitats of indigenous species often occur on both private and public land. There can be tensions between the aspirations of landowners for land use and development and the need to protect those areas and habitats.

Page 1 of 21

- ii. Ecosystems are not always confined to definable sites; maintaining indigenous biodiversity requires more than the protection of sites of especially high biodiversity value. It also involves the growth, creation and restoration of new or past sites and the protection of areas that provide an ecological buffering or connectivity function.
- iii. The costs of protecting areas and habitats are local and often specific to an individual, yet the benefits may be local, regional and national.
- b. The Act identifies the protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna as a matter of national importance. This chapter of the District Plan identifies areas of significant indigenous vegetation, biodiversity and habitats of indigenous fauna which qualify as Significant Natural Areas – these areas can be held in public and private ownership or ownership may be split.
- c. The sites are identified on the Planning Maps and are listed in Schedule 9C: Significant Natural Areas in Volume 2, Appendix 9. The significance of a site is based on the ecological significance of its indigenous vegetation. The sites were assessed using the criteria for determining significant indigenous vegetation and significant habitats of indigenous fauna contained in the Regional Policy Statement (2000).
- d. As restoration efforts continue in the City, additional Significant Natural Areas may be created. These will be added to Schedule 9C through changes to the plan through the First Schedule process under the Act.
- e. Significant Natural Areas include:
 - i. Identified areas of the Waikato River corridor and gully systems.
 - ii. Peat lakes and wetlands.
 - iii. Remnant indigenous vegetation or trees.
 - iv. Other areas that contribute to indigenous biodiversity.
- f. Threats to significant natural areas include the reduction or loss of habitats due to contamination, disturbance, destruction, invasive weeds, vertebrate pests and surrounding land uses. Maintaining the City's biodiversity is challenging because:
 - i. Areas and habitats of indigenous species often occur on both private and public land. There can be tensions between the aspirations of landowners for land use and development and the need to protect those areas and habitats.
 - ii. Ecosystems are not always confined to definable sites; maintaining indigenous biodiversity requires more than the protection of sites of especially high biodiversity value. It also involves the growth, creation and restoration of new or past sites.
 - iii. The costs of protecting areas and habitats are local and often specific to an individual, yet the benefits may be local, regional and national.

Significant trees or groups of trees Notable Trees

Page 2 of 21

- g. Volume 2, Appendix 9, Schedule 9D identifies individual trees or groups of trees on both public and private land. These are trees that have special value to the community or are outstanding specimen examples and individually or collectively are worthy of protection.
- h. Trees make an important contribution to the health and wellbeing of the residents of the City and to the quality of the Citycity's landscape. Trees contribute significantly to urban amenity values, and perform a range of environmental functions such as releasing oxygen; absorbing carbon dioxide and water; moderating micro-climates; giving shade and shelter from winds; providing land stability, particularly on gully and river banks; and providing habitat for wildlife birds and insects, both native and exotic species.
- i. Development Development can have significant adverse effects on the extent and condition of trees, particularly in terms of removal of larger trees and works within the Protected root protection zone. Retention of trees, particularly on private land, is a significant challenge.
- j. Once Once mature trees are lost, it takes time to establish a replacement. There are cumulative effects of the loss of individual trees and stands of trees, including loss of habitat, adverse effects on the urban ecosystem, loss of urban amenity and the green character of the City.

Peat Lakes, Wetlands and Peat Lake Catchments

- k. Peat lakes and wetlands have been degraded or lost because of a lack of information. A lack of knowledge about the location or significance of lakes and wetlands has led to their modification or destruction. Significant areas of the city's original wetlands have been drained and subsequently developed for urban purposes and this is likely to continue without adequate assessment and identification.
- I. Land use activities undertaken around peat lake and wetland margins, and within wider peat lake catchments can affect the ecological viability of these natural features. The protection of peat lakes and wetlands is dependent upon managing the effects of activities within the surrounding catchment as well as around the lake margins. Activities within this wider catchment can adversely affect the drainage (e.g. lowering of the water table) and water quality of the lakes.
- m. Recreation and amenity values can be lost through urban development and subsequent use. Destruction of lakes or wetlands precludes their use as recreation assets, while degradation of lakes and wetlands affects their visual values and limits their potential as attractive amenity features.
- n. Peat Lakes, Wetlands and Peat Lake Catchments are identified in the Features Maps of Volume 2, Appendix 17

20.2 Objectives and Policies: Natural Environments

Significant Natural Areas

Objective	Policies
20.2.1 Significant Natural Areas are protected, maintained, restored and enhanced.	20.2.1a The Identify the values and characteristics that define the City's Significant Natural Areas shall be identified as a schedule in

Page 3 of 21

Appendix 9C.

20.2.1b

Areas Map areas of significant indigenous vegetation and, biodiversity and significant habitats of indigenous fauna shall be scheduled on the planning maps as Significant Natural Areas.

20.2.1c

The particular values and characteristics that make an area a Significant Natural Area shall be protected from adverse effects by having regard to:

- The character and degree of modification, damage, loss or destruction that will result from the activity.
- The duration and frequency of effect (e.g. long-term or recurring effects).
- iii. The magnitude or scale of effect, including effects on ecological processes supporting or provided by the Significant Natural Area.
- iv. The irreversibility of effect.
- v. The resilience of the area to assimilate change.
- vi. The opportunities to minimise pre-existing or potential adverse effects (e.g. restoration or enhancement), where avoidance is not practicable.
- vii. The probability of effect.
- viii. Cumulative effects.
- ix. Need for, or purpose of, the works.

20.2<mark>.1d</mark>.1c

Adverse

Avoid the following adverse effects of development on the City's Significant Natural Areas shall be avoided:

- i. Loss of ecosystem function, representation and extent; and
- ii. Fragmentation; and
- iii. Loss of connectivity or buffer function; and
- iv. A reduction in the habitat of any Threatened or At-Risk species to the extent it may result in a reduction in the occupancy and presence of those species.

20.2<mark>.1e</mark>.1d

The reduction, fragmentation Where it is not possible for infrastructure and isolation public walkways and cycleways to avoid the adverse effects on Significant Natural Areas listed in Policy 20.2.1c, manage adverse effects on Significant Natural Areas in accordance with the following effects management hierarchy:

i. Adverse effects are avoided where practicable; and

Page 4 of 21

ii. Where adverse effects cannot be demonstrably avoided, they are minimised where practicable; and
iii. Where adverse effects cannot be demonstrably minimised, they are remedied where practicable; and
 iv. Where more than minor residual adverse effects cannot be demonstrably avoided, minimised, or remedied, biodiversity offsetting is provided where possible; and
v. Where biodiversity offsetting of indigenous ecosystems more than minor residual adverse effects is not demonstrably possible, biodiversity compensation is provided; and
vi. If habitats shall be biodiversity compensation is not appropriate, the activity itself is avoided.
20.2.1f The loss or disruption of corridors or connections linking indigenous ecosystems and habitat fragments shall be avoided.
20.2.1g.1e Recognise that biodiversity offsetting and biodiversity compensation will not be appropriate when:
 The loss indigenous biodiversity affected is irreplaceable or disruption vulnerable; or
ii. The adverse effects on indigenous biodiversity are uncertain or unknown, but those adverse effects are significantly adverse; or
iii. There are no technically feasible options to migratory pathways in water, land or air shall be avoided secure the proposed indigenous biodiversity gains.
20.2.1h Adverse effects on ecosystems resulting from changes to hydrological flows, water levels and water quality shall be avoided.
20.2-1i_1f When assessing adverse effects on Significant Natural Areas, recognise the value and ecological function of mapped Significant Natural Areas in Appendix 9C by considering:
 i. The lessecological significance criteria that have been identified for each Significant Natural Area in Appendix 9C; and
ii. The classification of the Significant Natural Area as follows:
a. Floristic SNA (fSNA) as areas of significant naturally [456] indigenous vegetation, including wetland and terrestrial vegetation, that is under-represented in the Hamilton Ecological District, is regionally or

Page 5 of 21 Print Date: 15/12/2022

disruption nationally uncommon or forms part of protective buffering an exceptional or uncommon ecological sequence.
b. Corridor SNA (cSNA) as areas of indigenous ecosystems shall be avoided and exotic vegetation that provide significant indigenous fauna habitats, including Threatened or At-Risk indigenous species, and connectivity and ecological buffering between regionally and nationally important Significant Natural Areas.
20.2.1j.1g Enable Provide for [425] infrastructure and public walkways and cycleways to be located near or within Significant Natural Areas where they: The loss i. Have an operational and functional need for that location; ii. Provide public benefits; and
iii. Contribute to the economic, social, cultural and environmental well-being of ecosystem services shall be avoided people and communities.
20.2.1k The loss, damage or disruption to ecological processes, functions and ecological integrity shall be avoided.
20.2.41.1h The loss or reduction of Recognise the cultural need for essential pruning, maintenance and spiritual association with tree removal in Significant Natural Areas where these have minor adverse effects on indigenous biodiversity [425], which are held by tangata whenua shall be avoided including customary activities and actions necessary to address a high risk to public health and safety, and property; that which is associated with restoration activities; and to enable the operation, maintenance or upgrading of existing infrastructure [425].
20.2.1m _1iNon-native pest species within Promote increasing the extent of Significant Natural Areas shall be controlled and indigenous biodiversity to meet the target of 10% indigenous vegetation cover in the City.
20.2.1n.1j The lossRecognise the role of habitat that supportsmana whenua as kaitiaki and landowners as stewards in protecting and restoring Significant Natural Areas and indigenous species classified as at risk or threatened shall be avoided biodiversity.
20.2.1o.1k Enable activities that improve public connection to, and appreciation of, Significant Natural Areas shall be restored and indigenous biodiversity provided that:
i. Significant Natural Areas are protected; and

Page 6 of 21 Print Date: 15/12/2022

ii. Indigenous biodiversity is maintained or enhanced to meet at least the 10% threshold for habitat sustainability. [329]
20.2.1p.1l Develop a local indigenous biodiversity strategy Enable activities that seek to identify opportunities to restore implement the vision, goals and enhance biodiversity outcomes in Hamilton the Nature in the City Strategy 2020-2050.

Explanation

Protection of indigenous biodiversity will be promoted through the identification and protection of Significant Natural Areas. These exist throughout the Citycity on both public and private land. Recognition of these areas within the District Plan will result in protection through a restriction on activities that can occur within, and adjacent to, such areas.

New Significant Natural Areas may be identified in the future. Where new areas meet the criteria, they will be added to the Schedule through the First Schedule process under the Act and protected.

Managing any further loss to areas of biodiversity value and restoring and enhancing sites is critically important. At least 10% of remnant habitat cover is needed across a landscape in order to protect biodiversity and the functions of ecosystems. Only 1.5% of Hamilton City is covered by ecologically significant land. Hamilton City will need to keep maintaining and restoring sites as well as enhance significant natural areas Significant Natural Areas to cover a variety of landforms and vegetation types within Hamilton City.

The protection of significant habitats of indigenous fauna, particularly those that are at risk or under threat, is an important role of Significant Natural Areas. Retaining these significant habitats is important for the protection of those species that are supported within Hamilton City.

Key methods available include controlling pests, removal and modifications to areas of indigenous species or habitats. Protecting biodiversity is challenging, as many areas and habitats occur on private land and there can be tensions between the aspirations of private landowners for land use and development and the need to protect those areas.

Indigenous biodiversity within the Citycity is valued by TangataMana Whenua. As people of the land, MaoriMaaori have a connection with the indigenous flora and fauna of New Zealand and their ecological processes. This relationship must be preserved through the maintenance and enhancement of indigenous biodiversity.

In order Hamilton City Council's Nature in the City Strategy 2020-2050 has an overall vision of 'Nature thrives in Kirikiriroa/Hamilton'. The strategy seeks to provide achieve this vision through four outcome areas with an overall goal to achieve 10% native vegetation cover in Kirikiriroa/Hamilton by 2050'. The District Plan provides an important role in achieving the most appropriate combination of regulatory vision, goal and non-regulatory tools to help outcomes in the Nature in the City Strategy 2020-2050 by providing an enabling framework for activities which restore and enhance biodiversity Significant Natural Areas and increase indigenous vegetation in Hamilton City, an Indigenous Biodiversity Strategy will be developed and adopted in accordance with the Waikato Regional Policy Statement. This will occur in partnership with the Waikato Regional Council, tangata whenua, landowners, and other key stakeholders, with development of the policy to commence no later than 2016Kirikiriroa/Hamilton.

<u>Objective</u>	<u>Policies</u>
20.2.2 Significant habitat for long-tailed bats is protected and enhanced.[423, 425]	20.2.2a Manage adverse effects on long-tailed bat habitat within Significant Natural Areas in accordance with the effects management hierarchy in Policy 20.2.1d. [423, 425]
	20.2.2b Restore and enhance Significant Natural Areas to improve habitat for long-tailed bats. [423, 425]
	20.2.2c

Page 7 of 21

Establish a City-wide Bat and Habitat Enhancement Panel to advise on matters relating to the creation, restoration and enhancement of habitat for long-tailed bats, and the monitoring of long-tailed bat activity. [423, 425]

Explanation

Significant Natural Areas throughout the City provide habitat for the threatened – nationally critical long-tailed bat which is important to protect and enhance. To help to achieve this an integrated approach across all Significant Natural Areas in the City for restoration of long-tailed bat habitat and monitoring of long-tailed bat activity is required. The role and responsibilities of the City-wide Bat and Habitat Enhancement Panel are addressed in Appendix 1.5.4 r). [423, 425]

Objective	Policies
20.2.23 Public awareness and appreciation of Significant Natural Areas and their values is increased.	20.2.3a Enable activities that improve public connection to, and appreciation of, Significant Natural Areas and indigenous biodiversity provided that:
	 i. Significant Natural Areas are protected; and ii. Indigenous biodiversity is maintained or enhanced.[329]
	20.2.2a3b Communication Encourage communication between affected landowners, Department of Conservation, iwi, Council [282, 287] and other organisations that can assist in the management, protection and conservation restoration of these areas shall be encouraged Significant Natural Areas.
	20.2.2b3c Information Provide information to the public and landowners on the management, protection and restoration of Significant Natural Areas and other legislative means of protection shall be readily available to the public.

Explanation

Education and information assists landowners and residents in understanding the values and dynamics of Hamilton's biodiversity, as well as methods for managing areas of indigenous habitats. In addition, Council, in conjunction with Waikato Regional Council, will support landowners' voluntary protection initiatives, including promoting QEII National Trust Covenants, as well as directing landowners to sources of funding support, such as for fencing or pest control.

Significant Notable Trees

Objective	Policies
20.2.3 The values of significant trees Notable Trees are protected and maintained.	20.2.3a The particular factors, values and features of trees listed in Schedule 9D shall be protected from inappropriate subdivision, use and development, by assessing: The need for emergency removal. The extent that any proposed maintenance will adversely affect the health of the tree.

Page 8 of 21

The character of the area in which the tree is located, including streetscape and public realm areas. The potential adverse effects on the health of the tree. The nature and extent of any proposed activities to be undertaken within the pool protection Protected Roof zone of the tree. The extent to which the removal, re location, or trimming can be mitigated by replacement planting. Where the removal of significant trees cannot be avoided, any loss of value must be appropriately remedied or mitigated. 20:2.35 Scheduled trees within established urban areas shall be removed or transplanted only under exceptional circumstances, and where alternative options for the retention of the tree have been exhausted. 20:2.36 Within areas of greenfield development the values of significant trees shall be maintained and taken into account in the layout and design of new development. 20:2.3d,3b Any work on a scheduled tree; Removal or well-transplantation of Notable Trees within the reel protection zene of any scheduled tree established urban areas shall not adversely affecte avoided except where: i. Alternative options for the values retention of the tree's excheduling removal, re-location, or trimming can be mitigated by replacement planting. 20:2.3e,3d Before undertaking Any work on a notable tree, or work within the protected root zone of any setting the inotable tree shall not adversely affecte and estaking Any work on a notable tree, or work within the protected root zone of any setting the inotable tree shall not adversely affecte and estaking Any work on a notable tree, is scheduling in the protected root zone of any setting the inotable tree shall not adversely affecte and estaking Any work on a notable tree, or work within the protected root zone of any setting the inotable tree shall be undertaken. Explanation		undertaken Notable Trees to ensure the ongoing health, wellbeing
	Explanation	

Page 9 of 21 Print Date: 15/12/2022

Much of Hamilton's distinctive character is derived from its trees, which are an integral part of the City's amenity and identity. Significant Notable trees can be individual specimens or groups of trees on such public or private properties, as Jubilee Bushwell as significant street trees.

Trees also have an important role in terms of maintaining life-supporting processes and assisting the functioning of the urban ecosystem. The protection of identified significant notable trees is important. The policies identify that both works to significant Notable trees and works within the protected root protection zone of significant Notable trees need to be managed.

It is acknowledged that within greenfield through the development areas there are of sites, opportunities to design development to minimise the impact on significant Notable trees should be explored. A specific assessment of the values of trees within the development area is required, with the greatest protection given to those trees with the highest values. There may however be times when full retention is not practicable and trees have to be removed. In this case the Council expects the loss of these trees to be mitigated through replacement planting.

Peat Lakes, Wetlands and Peat Lake Catchments

Objective

20.2.4

The natural character and ecological viability of peat lakes, wetlands and their margins as visual, cultural, wildlife, and recreational assets are protected and enhanced.

Policies

20.2.4aIdentify and protect the remaining peat lake and wetland areas within the city from the adverse effects of urban development.

20.2.4b

Avoid, remedy or mitigate the adverse effects of urban stormwater to maintain and enhance the water quality of the city's peat lakes and wetlands as habitats for fish, other aquatic species, and plants.

20.2.4c

Control development within identified peatland catchments surrounding lakes and wetlands to maintain and enhance the quantity and quality of groundwater and ecological viability of peat lakes and wetlands.

20.2.4d

Ensure public access around peat lake and wetland margins and recreational activities on the surface of water are compatible with maintaining ecological values.

20.2.4e

Maintain those aspects of the environment that are of significance to Waikato iwi, in particular the spiritual dimension and mauri (life force) of water.

Explanation

Several wetland areas remain in the city, although significant areas of the city's original wetlands have been drained. It is because of this rarity that these areas are of such significance. They also identified as matters of national importance under Sections 6 and 7 of the RMA.

Knowledge about existing sites (particularly wetlands) is limited. Identification and assessment of these sites will be the first step towards their protection.

The fragility of existing peat lake and wetland habitats within the city is exacerbated by a lack of adequate buffer protection. If land use activities on the surrounding peatland catchment are controlled (particularly in terms of maintaining the water table) this will help to maintain their natural functioning i.e. the ecological services they provide (such as acting as a stormwater sponge). Subsequent effects on infrastructure will also be minimised due to a slowing of differential shrinkage.

The provision of open space and extension of green areas around peat lakes and wetlands where practicable will enhance their protection and enable public access. This will affect the proximity of structures and

Page 10 of 21

impermeable surfaces to peat lakes and wetlands. It will provide for potential disposal of stormwater to ground in appropriate areas, reducing stormwater discharges, improving surface water quality and maintaining the watertable.

20.3 Rules – Activity Status Table

Traics – Activity Status Table		
Vegetation pruning, maintenance, planting, and removal in a Significant Natural Area, Schedule 9C (Volume 2, Appendix 9)	<u>cSNA</u>	<u>fSNA</u>
Activities within a Significant Natural Area, Schedule 9C (Volume 2, Appendix 9)		
a. Pruning, maintenance or removal of indigenous and exotic vegetation or trees (excluding as provided for by h) Notable Trees in Volume 2, Appendix 9, Schedule 9D: Notable Trees), and excluding as provided for by Rule 20.3(b) [356], where:	Р	<u>P</u>
 i. Necessitated by disease or age Necessary to prevent the spread of disease [425, 171, 172, 328, 326]; or 		
ii. The tree has failed and/or ‡there is an unacceptable imminent [201] risk to public health, safety or property, or a network utility [133], and Standard 20.5.4 is complied with [201]; or		
iii. The pruning or maintenance work is necessary to construct, a structure associated with restoration or safety, or maintain or upgrade an existing or permitted structure or private track,s and fencing where Standard 20.5.1 is complied with; or [68, 154, 256, 326, 371]		
 iv. The pruning, maintenance or removal is for customary activities; or v. The pruning or maintenance work is within 1m of an existing lawfully established building [428] 		
b. Removal or management of flora and fauna [356] pest species associated with, including pest control where Standard 20.5.6(c) is complied with. [456, 371, 356, 100]	Р	P
c. Planting and management of indigenous vegetation or trees for the purposes of restoration, [329] including relocation of indigenous vegetation or trees within the same Significant Natural Area [425]	Р	Р
d. Planting of exotic vegetation or trees in a Significant Natural Area for erosion control and stability or restoration purposes where Standard 20.5.5 is complied with [201, 425, 456]	P RD P [201, 425, 456]	PRD [201, 425, 456]
e. Pruning, maintenance or removal of indigenous or exotic vegetation or trees associated with restoration where:	Р	RD
i. This is not provided for by either 20.3(a) or 20.3(b); and		
ii. Standard Link [317] 20.5.6 is complied with in a cSNA		
ea. Pruning, maintenance or removal of exotic vegetation or trees associated with restoration where this is not provided for by 20.3(e). [456, 371, 356, 100]	RD	RD

Volume Notable Trees, Schedule 9D (Volume , Schedule 9D: Significant Trees)		
s. Emergency Emergency works to, or removal of, a scheduled Notable tree where:	Р	
 i. There The tree has failed and or is an imminent threatrisk to life, public health or safety and property, or a network utility, and Standard 20.5.4 is complied with [201] 		
 ii. The scheduled tree Notable Tree carries a fatal diseasebiosecurity risk that is confirmed by a qualified arborist. 		
t. Minor pruning and and maintenance of a scheduled Notable tree	Р	
 All pruning retains the natural shape of the tree and ensures the ongoing health, wellbeing, and longevity of the tree 		
ii. Pruning of branches and/or roots that does not exceed the standards outlined in 20.5.2		
iii. Removal of broken branches, deadwood or diseased vegetation		
iv. Retention of the natural shape, form and branch habit of the notable tree		
v. Removal of branches that physically are interfering with buildings, infrastructure, pedestrian or vehicle accessway when the work is carried out by or under the guidance of a qualified Works Arborist that does not exceed the standards outlined in 20.5.2.		

Page 13 of 21 Print Date: 15/12/2022

u. Pruning and maintenance of a notable tree not in accordance with Rule 20.3 t)	RD
v. The following activities located no closer than 3m from the base of any notable tree in the within the Protected Root zone of any notable tree, which do not exceed the standards outlined in 20.5.3: [381, 383, 384, 394]	<u>P</u>
 i. Earthworks using non-mechanical practices (hand digging, hydro and/or airspade), for the purpose of installing, replacing, repairing and maintaining underground network utilities., which do not exceed the standards outlined in 20.5.3 	
ii. Gardening or hand-held non-mechanical cultivation	
iii. Digging of holes for fence posts using non-mechanical practices.	
iv. <u>Directional drilling or boring for trenchless pipe/duct installation deeper than 800mm below the ground surface.</u>	
v. Additions to, or the replacement of, any existing building or structure that is proposed that do not exceed the envelope or footprint of the existing building(s) or structure(s) [43, 138, 139, 437, 439, 266, 301, 353, 408, 410]	
vi. The placement and/or construction of any building or structure that do not exceed the envelope or footprint of the existing building(s) or structure(s) [43, 138, 139, 437, 439]	
vii. The temporary storage or placement of materials, vehicles, plant or equipment on existing or temporary load bearing surface during construction activities or temporary event. [43, 138, 139, 437, 216, 439, 381, 383, 384, 394]	
viii. Routine maintenance and repair and replacement of existing tracks, footpaths, lawns and gardens and fences including any associated layers.	
ix. The maintenance, repair, or like-for-like replacement of existing impervious surfaces including any associated base layers.	
w. The following activities located within the root protection Protected Root zone of any scheduled notable tree:	RD
i. Earthworks (excluding as provided for by v. i., ii. er iii, or viii.	
ii. The laying, sealing, paving or forming of any impervious surface not provided for in 20.3v. ix. that exceed the area of impervious surfaces that already exists at (insert decision date [216, 383, 384, 394, 43, 138, 139, 437, 439]	
iii. The alteration of the ground level by either permeable or impervious materials.	
 iv. Additions to, or the replacement of, any existing building or structure that is proposed to exceed the envelope or footprint of the existing building(s) or structure(s). 	
v. The placement and/or construction of any building or structure.	
vi. Directional drilling or boring for trenchless pipe/duct installation less than 800mm below the ground surface.	

vii. The storage, release, injection or placement of chemicals or other toxic substances

Page 14 of 21 Print Date: 15/12/2022

su	<u>bs</u>	tar	100	es.

- viii. The new and permanent storage of new permanent materials, vehicles, plant or equipment.
- ix. Planting of trees except planting of shrubs and plants that do not grow greater than 3m. [201, 168]
- x. Non-emergency works to, removal of, or transplanting of a scheduled notable tree

D

Note

- 1. For any activity not identified above, see Section 1.1.8.1.
- 2. For activities and buildings in the Electricity National Grid Corridor see Chapter 25.7: City-wide Network Utilities and the Electricity National Grid Corridor.
- 3. Any works to a notable tree located close to power lines are required to be undertaken in accordance with clause 14 of the Electricity (Hazards from Trees) Regulations 2003, or clause 128 of the Telecommunications Act 2001, and works are undertaken by or under the supervision of a qualified arborist employed by a network utility operator.
- 4. The extent of the individual Protected Root Zone for each Notable Tree, as shown on the planning maps is indicative. The radius measurement in Appendix 9D is to be measured from the centre of the trunk of the Notable Tree to confirm the physical location of the Protected Root Zone.
- 5. Rules 20.3(ga), (gb) and (gc) apply in the Peacocke Precinct instead of Rules 20.3(jb), (l) and (n). [423]
- 6. Activities in SNAs affecting protected wildlife must also comply with the Wildlife Act 1953. [425]

20.4 Rules – General Standards

20.4.1 Activities within or affecting the Peat Lakes, Wetlands and Peat Lake Catchments

a. Building Setback

The minimum building setback from the margin of any Peat Lake or Wetland shall be 50m plus the relevant setback requirement for the relevant zone.

b. Impermeable Surfaces

The maximum area of impermeable surfaces of that part of the site within the Peat Lakes, Wetlands and Peat Lake Catchments, shall not exceed 40%.

c. Vegetation Removal

Any area of vegetation removed in or within 5m of the margin of any Peat Lake or Wetland shall be replanted with an equivalent area of appropriate wetland species within one calendar month.

Note

Any replanting of vegetation shall have regard to the Regional Pest Management Strategy, and should not include plant pest species as identified within the strategy.

- d. Earthworks (Including Clean Fill)
 - i. The maximum volume of earthworks within the Peat Lake Catchment shall not exceed

Page 15 of 21

40m³ per site per calendar year

- ii. Earthworks shall not take place in or within 5m of the margin of any Peat lake or Wetland.
- e. Stormwater Disposal
 - Stormwater run-off from any new building on any site that is wholly or partly covered by any Peat Lake, Wetland and Peat Lake Catchment shall be disposed of directly to the ground.

Note

The Hamilton City Infrastructure Technical Specifications contains acceptable means of compliance for the design and implementation of any stormwater disposal system.

20.5 Rules – Specific Standards

20.5.1 Pruning and Maintenance in a Significant Natural Area

a. Maximum amount of foliage to be removed per tree per calendar year	15%
b. Maximum thickness (cross-section) of any branch or root that may be cut	50mm

OR

For Significant Trees identified in Schedule 9D only:

- c. Confirmation of the necessity for the works shall be provided to Council:
 - i. Before any works are undertaken, and
 - ii. The works shall be carried out by an appropriately qualified person (e.g. an arborist)

20.5.2 Pruning and Maintenance of Notable Trees

a.	Maximum amount of foliage to be removed per any 12-month period	5% of foliage
b.	The maximum pruning of living canopy and only lower branches [412, 353] over any three-year period.	10% of living canopy
C.	Maximum thickness (cross-section at point of severance) of any branch that may be cut to retain the natural shape, form and branch habitat of the tree is retained [412, 353]	<u>50mm</u>
d.	Maximum thickness (cross-section at point of severance) of any branch that may be cut to retain the natural shape, form and branch habitat of the tree is retained and when [412, 353] the work is undertaken, or supervised by a qualified Works Arborist.	<u>100mm</u>
e.	Maximum thickness (cross-section at point of severance) of any root that may be cut.	<u>35mm</u>
f.	Maximum thickness (cross-section at point of severance) of any root that may be cut when the work is undertaken, or supervised by a qualified Works Arborist. [412, 353]	<u>80mm</u>

20.5.3 Activities in the Protected Root Zone of a Notable Tree

a.	Maximum thickness (cross-section at point of severance) of any root that may be	<u>35mm</u>
	cut when the work is not undertaken, or is not supervised by a qualified Works	
	<u>Arborist</u> [412, 93, 138, 139, 216, 437, 439, 43]	

Page 16 of 21

b. Maximum thickness (cross-section at point of severance) of any root that may be cut when the work is undertaken, or supervised by a qualified Works Arborist. [412, 93, 138, 139, 216, 437, 439, 43]

80mm

c. The maximum soil level depth increases over existing levels [412, 93, 138, 139, 216, 437, 439, 43]

50mm

d. Maximum mulch layer depth

100mm

e. Maximum area of earthworks using non-mechanical practices, for the purpose of installing, replacing, repairing and maintaining underground network utilities, when within 3m of the tree's trunk and where the work is undertaken, or supervised by a qualified Works Arborist [412, 93, 138, 139, 216, 437, 439, 43] with the exception of the use of an airvac.

1sam

f. Maximum amount of ground disturbance when gardening and cultivation using hand-held tools or non-mechanical cultivation within existing garden beds per an 12-month period

10%

g. Roots over 35mm in diameter shall be protected using methods that ensure no bark or cambium tissue is damaged

1sqm

h. Maximum area of earthworks for the purpose of installing, replacing, repairing and maintaining underground network utilities, with an airvac or hand digging, when outside 3m of the tree's trunk and when the work is not undertaken, or is not supervised by a qualified Works Arborist [412, 93, 138, 139, 216, 437, 439, 43]

10%

i. Maximum area of earthworks, when outside 3m of the tree's trunk and when the work is undertaken, or supervised by a qualified Works Arborist using modern best practice. [412, 93, 138, 139, 216, 437, 439, 43]

20.5.2.4

Emergency Works to, or Removal of, an Indigenous [201] Tree in a Significant Natural Area or a Scheduled Notable Tree

- a. Confirmation of the necessity for the works or removal shall be provided to Council:
 - i. Before any works are undertaken, and
 - ii. The works shall be carried out by an appropriately qualified person (e.g. an arborist).

20.5.5

Planting of Exotic Vegetation or Trees in a Significant Natural Area

Either:

- a. The planting is for the purpose of erosion stability and:
 - i. Written confirmation is provided to Hamilton City Council that the planting is in accordance with a willow management strategy that has been approved by Hamilton City Council or Waikato Regional Council prior to the planting taking place; and

Page 17 of 21

- ii. The exotic vegetation or tree(s) is removed no longer than 10 years after it was planted, or as otherwise advised by a suitably qualified person; or
- b. It is for the purpose of restoration and written confirmation is provided to Hamilton City Council that the planting is in accordance with a restoration plan that has been approved by Hamilton City Council prior to the planting taking place. [201, 425, 456]
- 20.5.6 Pruning, maintenance or removal of indigenous or exotic vegetation or trees associated with restoration in a cSNA-[456]
 - a. Either:
 - i. The works are required to maintain an existing walking access track used for restoration activities; or
 - ii. No more than 50m² of vegetation or trees are removed per site per calendar year; and better the area cleared is planted with indigenous vegetation or trees within 12 months;

and

c. Either:

- i. Any tree removed must have a diameter of no more than 150mm measured at 1.4m in height above ground level; or
- ii. The tree has a diameter greater than 150mm, measured at 1.4m in height above ground level and:
 - 1. A suitably qualified person has confirmed that there is a low potential for the tree (alive or dead) [425] to be used as habitat for either bats or any other Threatened or At-Risk indigenous fauna (refer to NZTCS.org.nz) [425]; and
 - 2. The report from the suitably qualified person is provided to Hamilton City Council prior to the removal of the tree(s).
- 20.5.7 The operation, maintenance, renewal or upgrading of, or access to, existing infrastructure and public walkways and cycleways
 - A. Pruning, maintenance or removal of indigenous or exotic vegetation or trees
 - a. The works are required to maintain an existing walking access track to access existing infrastructure or contribute to restoring or enhancing SNAs [171, 172]; and or [201]
 - b. Either:
 - i. The works do not result in the removal of more than 100m2 of indigenous vegetation per site existing asset [425], per calendar year; or
 - ii. The works are limited to areas within two metres of the existing asset; and
 - c. Either:

Page 18 of 21

- i. Any tree removed must have a diameter of no more than 150mm measured at 1.4m in height above ground level; or
- ii. The tree has a diameter greater than 150mm, measured at 1.4m in height above ground level; and:
 - A suitably qualified person has confirmed that there is a low potential for the tree to be used as habitat for either bats or any other Threatened or At-Risk indigenous fauna; and
 - 2. The report from the suitably qualified person is provided to Hamilton City Council prior to the removal of the tree(s).
- d. Any area of vegetation cleared that is not required for ongoing access or operation of infrastructure is planted with indigenous vegetation or trees within 12 months. [201]

B. Earthworks

- a. The disturbance is limited to areas within 2m of the asset being operated, maintained, renewed or upgraded; or
- b. No more than 100m² of land is disturbed per site existing asset [425], per calendar year; and
- c. The area disturbed is reinstated as soon as practicable following the completion of the works.

C. Renewal or upgrading of infrastructure

The asset being renewed or upgraded is increasing in footprint by a maximum of 5% or 30m², whichever is the greater.

20.5.8 Structures associated with restoration or safety

- a. Either:
- The structure is a track and/or steps required to facilitate access to the SNA to carry out restoration activities; or
- ii. The structure is required to protect land stability and is no more than 1.5m high; or
- iii. The structure is a fence; or
- iv. The structure is less than 1m² in area and is for restoration purposes (e.g. plant training structures, bird feeders); and
- b. No lighting is to be installed in association with the structure.

[68, 154, 256, 326, 371, 425]

20.6 Restricted Discretionary Activities: Matters of Discretion and Assessment Criteria

Page 19 of 21

a. In determining any application for resource consent for a restricted discretionary activity, Council shall have regard to the matters referenced below, to which Council has restricted the exercise of its discretion. Assessment Criteria within Volume 2, Appendix 1.3 provide for assessment of applications as will any relevant objectives and policies. In addition, when considering any Restricted Discretionary Activity located within the Natural Open Space Zone, Waikato Riverbank and Gully Hazard Area, or Significant Natural Area Council will also restrict its discretion to Waikato River Corridor or Gully System Matters (see the objectives and policies of Chapter 21: Waikato River Corridor and Gully Systems).

Activity Specific	Matter of Discretion and Asses Reference Number (Refer to Volume 2, Appendix	
 Earthworks; laying of impervious surfaces; addition placement/construction of a new structure; direction chemicals within the root protection zone of any sch 	 D — Natural Character and Open Space F — Hazards and Safety
