

3,100 Watt Fuel Tank Replacement

This bulletin covers all Champion 3,100 Watt Inverter models.

Note: Read instructions completely before performing service.

You will need the following tools:

10mm wrench and socket, 7mm socket, Pliers and a Phillips Screwdriver

1. Remove the 3 screws along both the right and left handles. This will allow you to snap these handle pieces out. Also remove the gas cap. Remove the 10mm bolts and set aside the top yellow cover.

2. Remove maintenance panel and locate fuel drain hose. Place fuel drain hose into a safe fuel storage container and loosen drain screw. Turn fuel valve on to drain all gas from fuel tank.

3. Next remove the rubber ventilation hose that can be seen from the top of the fuel tank as well as the fuel line from the fuel ON/OFF valve.

4. With the hoses disconnected, you can remove the 7mm fuel tank bolts and set the existing fuel tank aside. Replace with new fuel tank and reverse these steps to complete install.

Service Guide

Number: 6020021
