

Choke Plate Replacement

This bulletin covers the following Champion Power Equipment models:

270cc – 439cc Engine Powered Generators

Note: Read instructions completely before performing service.

1. Remove the air cleaner cover by unsnapping the clips and remove the air filter.
2. Remove the 6 – 5mm nuts that hold the plastic air filter seat in place then pull out the filter seat.
3. Rotate the choke lever so the plate is completely open.
4. Using a pair of needle nose pliers, grab the choke plate and pull outwards; the plate will slide out of the choke shaft.
5. There is a small dimple on the flat side of the choke plate, be sure the dimpled side is facing the right. If the plate is installed upside down the plate will not line up in the venturi properly.

6. Slide the new choke plate through the slot in the choke shaft and with your thumb press the plate in until it snaps in to place. You will hear a click and the plate should not move inside the shaft.
7. Once locked in to the shaft, close the choke and be sure to watch the groove on the left to be sure it properly lines up in the venturi.
8. Re-install the air filter seat with 6 – 5mm nuts, put the filter back in place and fasten the air cleaner cover.
