## FIRE RESTRICTIONS

Due to the lack of rainfall and higher than normal temperatures this past spring, fire danger is above average in our area. As many of you know, we are susceptible to severe wildfire conditions year round with our unique climate and topography, however this year we are experiencing historically low fuel moistures, and have moved into peak fire season conditions earlier than anticipated.

In light of current fire conditions, the Hume Lake Volunteer Fire Department in cooperation with the U.S. Forest Service will implement the following stage 1 fire restrictions:

**Fires are allowed only in established fire rings, BBQs or grills with at least 10' of clearance. The location of the fire must have good clearance from nearby trees and clear of flammable ground debris. A water source or fire extinguisher must presnet at all times.**

Gas Bar-B-Q's and gas fire rings that can be immediately extinguished with a gas "shut-off" are permissible at this time.

These restrictions will remain in effect until current fire danger conditions decrease and the US Forest Service lifts restrictions on the forest.
