

A TANKLESS FOR ANY INSTALL SCENARIO

Our flagship line of tankless water heaters can take on any hot water demand and are designed to adapt to multiple installation scenarios.

EZ SERIES PRO

THE TOP TANKLESS™

The Noritz EZ Series Pro is built for maximum installation versatility and efficiency, and features our unmatched industry-leading 25- year warranty.

FEATURES

- › Industry-best 25-year warranty
- › Top-mounted water connections
- › Upgraded control panel
- › 0.98 UEF
- › Fast and easy installation

NRCCR PRO

FASTER HOT WATER WITH RECIRCULATION

Our NRCCR Pro comes with an integrated recirculation pump engineered to bring your home faster hot water when you need it. The newly updated control panel allows for faster setup and custom scheduling to fit your home's hot water needs.

FEATURES

- › Built-in recirculation pump
- › Upgraded control panel
- › 15 year warranty
- › Learning mode adjusts to your daily use for always-ready hot water

NRCB

BREAKTHROUGH HOME HEATING AND DOMESTIC HOT WATER

The NRCB is the first combi boiler on the market that can provide both DHW and home heating simultaneously for residential applications.

FEATURES

- › Simultaneous operation of DHW and home heating
- › 10 year warranty
- › 3 stainless steel heat exchangers
- › Stability and quick temperature control using the built-in remote

AMERICA'S MOST TRUSTED TANKLESS MANUFACTURER

Featuring a full lineup of tankless water heaters, Noritz has you covered with units designed to meet any hot water demand.

TANK VS. TANKLESS

COMPARISON GUIDE

GET MORE SAVINGS WITH TANKLESS

SAVE UP TO \$185 EVERY YEAR

A typical family saves \$100 or more per year with an **ENERGY STAR** certified tankless water heater — and savings grow with household size.

AVERAGE SAVINGS

FOR CONDENSING MODELS WITH A UEF RATING OF 0.95

FEATURES & BENEFITS

20+ YEAR LIFE EXPECTANCY

Tankless water heaters last 20 years or more — roughly double the 8 to 12 year lifespan of a conventional tank.

20 – 40% MORE EFFICIENT

A Noritz condensing tankless can cut water-heating energy use by up to 40% compared to a standard gas tank. For typical households, the U.S. Department of Energy puts tankless savings at 24–34%.

UP TO 9 SQUARE FEET RECLAIMED

Wall-mounted and compact, a Noritz tankless frees up an extra closet's worth of floor space compared to a bulky storage tank.

REBATES MAY BE AVAILABLE IN YOUR AREA

Many utilities and states offer incentives for high-efficiency and ENERGY STAR certified tankless water heaters. Visit NORITZ.COM/REBATES to find programs near you.

HOW DOES A NORITZ TANKLESS STACK UP AGAINST A STANDARD TANK HEATER?

In addition to saving you hundreds over the life of your unit, our Noritz line of tankless products offers on-demand hot water for your home, ensuring you never wake up to a cold shower again. Noritz also offers a longer warranty, space savings, and more. It's easy to see why homeowners across the country are making the switch. Here are just a few more reasons why Noritz is the smart choice:

DURABILITY

✓ UP TO 25 YEAR WARRANTY

Noritz tankless water heaters carry up to a 25-year heat exchanger warranty and a life expectancy of 20+ years with proper maintenance.

HOW THEY WORK

✓ ENDLESS HOT WATER

Heats water only when you need it. No tank to empty, no waiting for recovery.

WHEN THEY FAIL

✓ NO WATER DAMAGE

With no tank holding 30–80 gallons, a tankless failure does not release stored water into your home.

OVERALL COST

\$\$

Higher initial install cost, offset by lower operating costs and a lifespan roughly twice that of a tank.

6 YEAR WARRANTY

Conventional tanks typically last 8–12 years — meaning 2 to 3 tank replacements over the life of a single Noritz tankless.

HEATING 24 / 7 / 365

Tanks reheat stored water around the clock — even while you sleep — and once the tank empties, hot water is gone until it recovers.

7 OUT OF 10 TANKS BURST

These water heater failures involve a slow leak or sudden burst, and the average insurance claim for resulting water damage exceeds \$4,400 after the deductible.

✓ \$

Lower purchase price, but less efficient technology, higher operating costs, and 2–3 replacement cycles over 20 years.
