

SOFTENER IN AMERICA

JasonsWater.com

DARE TO COMPARE

It takes 3 to 5 other name brand systems to do what our 1 system does!

3 SYSTEMS IN ONE!

Total Softening

Certified as a WHOLE HOUSE Drinking System

Certified to ICC Plumbing Codes

KNOWLEDE IS POWER!

Service Flow Rate: If Water softeners are run at flow rates higher than the tested Service Flow Rate the unit will not soften the extra water. At higher flow rates hard water often bleeds through the water treatment unit, negating the benefits of soft water. Also, the total softening capacity of the unit may be decreased at these higher flow rates.

**KNOWLEDGE IS POWER
IGNORANCE IS DANGEROUS
BOTH HAVE CONSEQUENCES**

**DON'T
GET
SCAMMED**

Homeowners Are Buying Undersized Water Softeners

1. Which Reduces the Flow of Water !
2. Causes the Delivery of Hard Water !

VOLUME 13, NUMBER 14

Water Softners Can Gum Up Plumbing

Installing an undersized water softener in a residential plumbing system can reduce the flow of water to some of the fixtures in the home. Under sizing can also reduce the water softener's efficiency, causing it to deliver "hard" water, negating the benefits of your water softener. Many water softeners have rated flow capacities of five to twelve gallons per minute.

Plumbing code requirements and actual water demand for many homes can be considerably greater, up to 22 gallons per minute.

Jason's Water is the only Softener in America that has been Certified to Plumbing Codes By the National Association of Home Builders Research Center.
