

# Chekin

## WHAT IS CHEKIN

Is a secure authentication system that reduces the burden of login for your users, by enabling them to sign in with their Google account—the same account they already use with Gmail, Play, Google+, and other Google services. It is a gateway to connecting to Google’s users and services in a secure manner.

## HOW IS IT DEVELOPED?

It is developed using Google API's and is optimized for seamless integration with the Google Cloud Platform.

## THE PROS OF CHEKIN

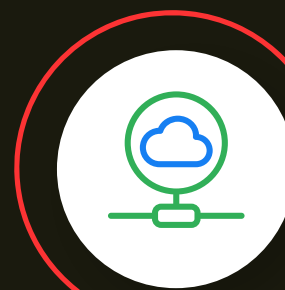

Abstracts the complex Google platform APIs

Extra features along with SSO for GSuite accounts login

Runs on Google Cloud Platform

Integrated with world class SMTP server

- IP Restrictions
- IP R. based on Organizational Units
- User Bypass
- Device Bypass
- Bypassing all mobile devices
- Force resetting of password
- Custom Logo
- Custom html in login page
- Two step verification
- Captcha on login failure
- Group management
- Authenticate with active directory
- Change pop & imap settings in bulk

### + THE ADVANTAGES OF THE OTHERS

- It is built on google cloud platform, so all the advantages which are provided by google cloud platform are also applicable for it.
- User bypassing.
- Signature setup for users.
- Device registration which are available in other sso products in the market.
- Adding bulk members to a G Suite group (at a time you can add only 25 users to a group from Gsuite admin panel).
