

ENTRUST DATACARD™

IntelliTrust™ Managed Services Program (MSP)

MSP Benefits

- Add a highly advanced, cloud-based authentication service to your portfolio
- Put your branding on a best-in-class security solution
- Remotely protect, monitor and support your customers from a single management console
- Maintain full control over reporting, pricing and billing
- Automated tools simplify customer onboarding and subscription management
- Easily assign the right tier of service and security to each customer

Key Capabilities

- Award-winning advanced adaptive authentication engine
- Deep integration with cloud and on-premises applications
- Widest range of authenticators — mix and match flexibility
- True multi-tier architecture
- Simple, non-disruptive deployment — easy management and maintenance

Add Today's Most Advanced Cloud-Based Authentication Solution to Your Portfolio

The IntelliTrust™ Managed Services Program (MSP) provides you with a profitable new opportunity. Now, you can deliver the industry's most advanced cloud-based authentication solution as a partner-branded service. Expand your portfolio with best-in-class authentication services — and enjoy the support you need to expand existing relationships and attract entirely new customers.

Convenient Single Management Console

Manage your customers' ongoing needs from one highly intuitive management console. Quickly add or remove customers and subscriptions and assign or modify tiers of service.

Flexible Pay-as-You-Go Pricing

Take advantage of a low-risk, high-reward opportunity when you add our authentication to your portfolio. Sign-up and get started completely online — there is no inventory to carry. Monthly billing is based on the number of users each month — and pricing automatically adjusts to the right tier as customers add or delete subscriptions.

A Collaborative, Profitable Partnership

We've designed our usage-based pricing model to deliver you strong margins — whether you are just getting started with authentication or are serving a large customer base. We also support you with qualified leads, demand generation programs, sales training, robust development operations, installation support, troubleshooting, 24x7 technical support and a technical certification program.

A Flexible, Comprehensive Platform

Our authentication service supports use cases for enterprises with requirements ranging from basic app and network access to high-assurance security for financial transactions and classified data. Common uses cases include:

VPN Access. Empower remote employees to work securely and efficiently—anytime, anywhere.

Customer and Partner Portals. Secure external access to apps, information and networks.

Cloud SSO. Frictionless access to apps coupled with strong protection against breaches.

On-Premises Systems and Apps. Strong authentication for critical resources that sit inside your customers' firewalls.

Desktop Log-In. Simplify access for users while safeguarding corporate networks and data.

Mobile Computing. Our solution works like a virtual smart card that resides on mobile devices — but there's nothing extra for the user to carry or insert.
