

CYREBRO

YOUR CLOUD-BASED CYBERSECURITY OPERATIONS PLATFORM. WHAT YOU SEE IS WHAT YOU NEED TO KNOW.

How many cybersecurity solutions do you use? To protect the different parts of their network, the average small business uses between 15 and 20 cybersecurity solutions, medium size companies employ between 50 and 60, and large corporations or enterprises have more than 130.¹

TMI – too much information? A company's network generates about 10,000 cybersecurity alerts per day. How do you make sense of, and handle, all the cyber-threat information about which you're constantly alerted?

Not enough time or expertise? Resolving cyber-threats is extremely time-consuming *and* requires a high level of expertise. Most businesses do not have dedicated IT security staff to handle this challenge, while enterprise staff may not have the best technology to digest and view the data or the time to sift through and analyze all the alerts they receive throughout each day.

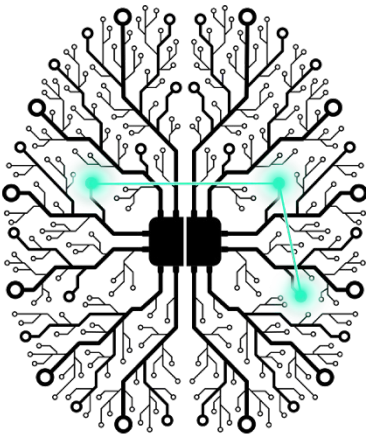

You need one centralized platform to collect and analyze all the cybersecurity information running through your solutions, and to recommend next steps.

■ Introducing CYREBRO

The CYREBRO Platform manages all your security logs, extracting the vital security information you need to make the right security decisions. It drastically reduces workloads and increases productivity for IT and cybersecurity teams.

¹ <https://biztechmagazine.com/article/2019/03/rsa-2019-most-organizations-use-too-many-cybersecurity-tools>

CYREBRO integrates all your security tools, solutions and technologies into a single platform, transforming cybersecurity information overload into visibility and meaningful context and clarity in real-time. Managed by the platform's cyberbrain™ which optimizes the threat-detection and alert process, you get a single, centralized view of all your cybersecurity incidents. You always know which threats affect which assets, how severely, and their root cause.

CYREBRO connects to your current cyber solutions (and any solutions you may add in the future) and integrates all your security events with strategic monitoring, real-time incident response and proactive threat intelligence. These are key to identifying and responding quickly and effectively to cyber incidents. The platform provides you with actionable recommendations, enabling you to make smart, fast, effective decisions to optimally mitigate risks.

Strengthen your security posture. With CYREBRO, you make better decisions that safeguard your assets against data breaches, ransomware and an ever-evolving arsenal of malware, and you protect your customers while maintaining maximum business continuity.

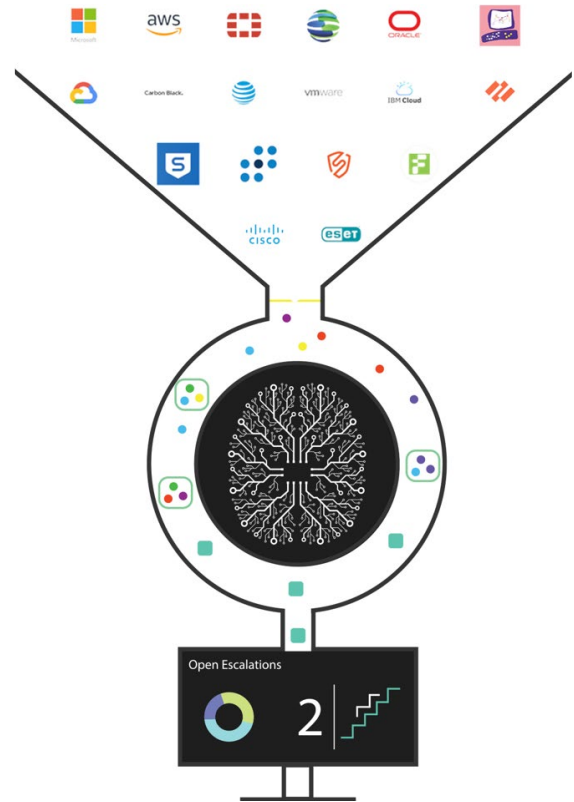

■ Making Sense of Complex Cybersecurity

Cyberbrain™ Proprietary detection algorithms and machine learning strategically monitors, analyzes and interprets the consequences of events across and between all your security solutions and business environments

Centralized vision See all your security events and what they mean for your business with simple clarity and smart prioritization

Transparent accountability Always know which security solutions are working for you, what should be done right now, and the status of all actions

■ CYREBRO Capabilities

Strategic monitoring

Contextual visibility within and across all systems automatically identifies the earliest signs of suspicious activity in real time

Threat hunting

Identifying, assessing, and improving detection capabilities by thoroughly searching through cyber threats and malicious activities

Threat intelligence

Continuous Indication of Compromise (IOC) based on granular contextual information and data mining tools provides highly accurate proactive alerts

Incident response

Real-time analyst response and mitigation ensure highest protection with minimal impact on business continuity

SIEM Optimization

Continuous development, learning of rules, correlations optimization, IOC updates, and new detection technologies maximize cyber security investments

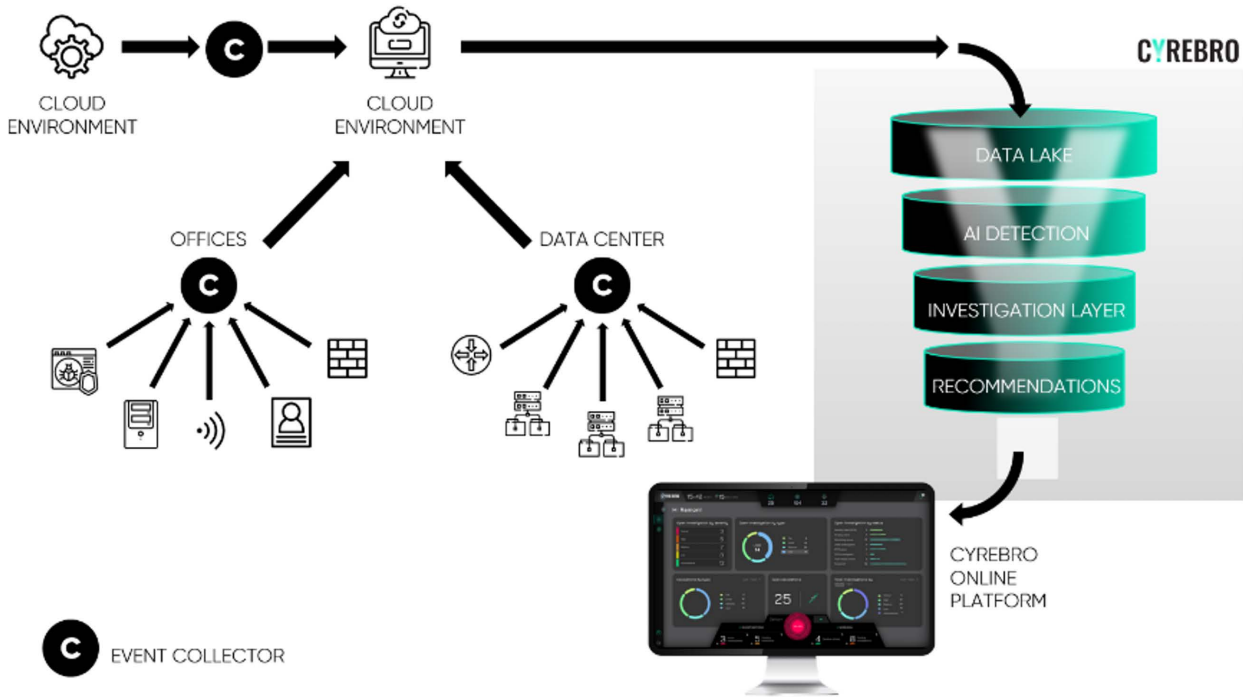

Forensic investigation

Ongoing investigation of suspected malicious activity and cyber threats including post-mortem analysis of verified incidents

Cybersecurity That Fortune 500 Companies Rely On - Designed For Your Needs

Our next gen interactive SOC platform gives any company the world's most advanced strategic monitoring, cyber analysis and decision-making insights, previously available only to elite, high budget security operations centers. Now every business of any size can stay ahead of even the most sophisticated hackers with their own cybersecurity command center.

Centralized

CYREBRO's sophisticated cross-function detection of suspicious activity detects exploitation of systems and processes across an organization. Only a centralized view of all cybersecurity events can provide prioritized clarity; you always know what's important and what to do about it.

Transparent

Always see which threats are real and understand their severity, what to do about them and when they're closed. See which security assets are necessary and which exhaust limited attention and resources with duplication or false alert fatigue.

Simplified

CYREBRO simplifies cybersecurity with full clarity of even the most complex situations so you can make the right business decisions, quickly, in any cybersecurity scenario. Avoid lengthy disruptions to business.

Time to resolution

CYREBRO radically reduces investigation time into malicious attacks from days to hours, and minutes to seconds. Minimized downtime saves significantly on billing, production, customer service, among other critical business functions. Prevention of reputation damage is priceless.

Who Can Benefit From The CYREBRO Platform?

Micro & SMBs

Finally, any size business can afford world class cybersecurity. Business owners understand exactly what's at risk and how to address incidents in order to protect their business, assets and customers without unnecessarily disrupting business-critical operations.

Enterprise

Optimize cybersecurity with or without deploying your own SIEM system with one simple, centralized platform. Technology-agnostic and scalable, CYREBRO leverages your cybersecurity investments so you always know what really needs attention, what's working and what actions have been taken.

MSSPs

MSSPs use CYREBRO's technological and operational platform to provide their clients with advanced, transparent SOC services. Save time and money with our hyper-efficient central command center for all your customers and save face with our world-class quality cyber technology that eliminates false positives and ensures that you're there with rapid response when your clients need you.

Our customized solutions and business plans meet the needs of companies of all sizes, in diverse industries and with varying security requirements.

About CYREBRO

CYREBRO was founded to help companies take cyber protection to new and unprecedented heights. We are on a mission to revolutionize cybersecurity operations by putting the power of a full-fledged Security Operations Center (SOC) in the hands of any user in any organization. Our team of premier cybersecurity experts has developed the industry's first cloud-based, technology-agnostic interactive SOC Platform. From strategic monitoring to proactive threat hunting, accelerated response, and enhanced compliance, the full scope of needs is covered. With its intuitive interface, and advanced automation and intelligence, the CYREBRO Platform enables all this without the need to invest in new solutions or hire in-house or external experts. Both Fortune 500 companies and SMBs alike can equally and profoundly improve their security posture with clarity, simplicity, and cost-efficiency.
