The proliferation of IoT use in business, open BYOD policies, and a global remote workforce exponentially increases the quantity of unmanaged IP-enabled devices directly neighboring enterprise infrastructure. One compromised printer can become an adversary's home base for reconnaissance, lateral movement, and a breach.

SentinelOne addresses this risk with Ranger, an integral component of our Singularity XDR Platform that turns endpoint Sentinel agents into distributed network sensors. Sentinel Rangers enable control of the enterprise network attack surface in real time by discovering, identifying, and containing any device-based threat. Your endpoints can now autonomously protect compute infrastructure from IoT attacks, compromised devices, and vulnerabilities. No hardware. No network changes. Simply enable Ranger in the endpoint policy and the Sentinel agents get it done.

Key Benefits

- Global networked device inventory
- Detect & alert on new devices
- Isolate device-based threats
- Hunt suspicious device activity
- Quantify exposure to Ripple 20

Challenging Problem. Minimal Friction Solution.

Singularity Ranger is designed to add global network visibility and control in one place with minimal friction. The Ranger solution is part of our Sentinel agent. Just toggle it on. Ranger eliminates the need for additional specialty agents, SPAN and TAP ports, and network gear dedicated to network visibility. Plus forget about tedious manual traffic capture and upload for analysis. Ranger makes it automatic.

RANGER

Ranger is the easy button for network attack surface control

RANGER KEY DIFFERENTIATORS

- + 1-Click network visibility
- + 1-Click control over unknown and IoT network devices
- + ML device fingerprinting via active & passive scanning
- + Highly configurable per subnet
- + No added software
- + No new hardware
- + No network changes

"

Ranger gives exceptional visibility where we had none.

Proactive Attack Surface Control

SentinelOne's Singularity platform delivers cloud managed distributed intelligence. Our differentiated endpoint protection, endpoint detection and response, cloud workload security, and IT operations capabilities consolidate multiple existing technologies into one solution. Singularity Ranger adds network and IoT control to the mix within the same agent. Ranger is designed to address customer requirements like these:

- · Monitor changes to configuration management database (CMDB) in real-time
- · Investigate devices and device activity
- Pivot from a suspicious device and hunt lateral movement activity
- · Isolate device-based threats with 1-Click
- Identify gaps in SentinelOne deployment coverage

ROGUES VS. RANGER WHAT'S THE DIFFERENCE?

Rogues and Ranger® are both built into the agent. The capabilities differ based on the purchased license level. Rogues is included in the Singularity Complete and Singularity Control product bundles. Ranger is an add-on product with multiple added network visibility and control capabilities.

Innovative. Trusted. Recognized.

Gartner

A Leader in the 2021 Magic Quadrant for Endpoint Protection Platforms

Highest Ranked in all Critical Capabilities Report Use Cases

Record Breaking ATT&CK Evaluation

- No missed detections. 100% visibility
- Most Analytic Detections 2 years running
- Zero Delays. Zero Config Changes

98% of Gartner Peer Insights™

About SentinelOne

More Capability. Less Complexity. SentinelOne is pioneering the future of cybersecurity with autonomous, distributed endpoint intelligence aimed at simplifying the security stack without forgoing enterprise capabilities. Our technology is designed to scale people with automation and frictionless threat resolution. Are you ready?
